

***Super_Filer 3.0* UPGRADE INFORMATION**

Interim Product Information, 7 Oct. 1995

It is expected that this version of *Super_Filer* will soon be enhanced to Version 3.0 which will include these and other new features for Windows 3.1 and Windows for Workgroups 3.1 users:

- * Version 3.0 will automatically create Program Manager Group Items for *Super_Filer*-created zip files. In the release you have now (2.0x) you must use Program Manager itself to drag the resulting batch file into Program Manager, which creates the Group Item. This feature is great for creating reusable zip files for use as fast, efficient backups of key files on your system
- * Ability to name each *Super_Filer* re-usable batch file on the fly, eliminating the need to rename the resulting Group Item after installation in Program Manager
- * Zip file contents view feature
- * Complete, highly detailed Windows Help File on-line manual for easy on-line assistance. On-line, context-sensitive help makes the new, in-depth manual available in complete form on-line
- * Same easy-to-learn menus with more features and enhanced visual attractiveness
- * *Super_Filer* Version 3.0 will run in Windows 95 and include tips for using the program in this new operating system. A version designed specifically for use in Windows 95 will be available in late 1995 or early 1996 (Write or fax for more information)
