1.1 TTL V1.0 Documentation

```

1.2 Description

```
  This program takes a TTL number and tells you the function of the
  TTL circuit with this number. It do so by using requesters.
```

1.3 Requirements

```
  This program require reqtools.library to be available in your system.
  reqtools.library is *NOT* included in this archive but is widely
  available and shouldn't be hard to find if you don't already have
```

this library.

1.4 Installation

If reqtools.library is not installed in your system, then get this
from your favorite PD source and follow the installation directions
from the reqtools package.
It should now be possible to run TTL from where ever you decide to
put it.
The program is "pure" and reentrant so if the pure bit is not set
do I suggest that you set it with the C:Protect command so you
can 'resident' it.

1.5 Usage

Just double click on its icon, or start it from CLI and answer the requesters.

1.6 Bugs

               No known
           bugs
           , but if you find any please report them to
  the
           author
           . Please make clear what's wrong and tell me what you
think should be there instead.

1.7 Bugs

Bugs are regarded as either faulty program code or incorrect answers.

1.10   History

10-Feb-1995 v1.0 First release version.

1.11   Future

Showing pin configuration for the TTL circuits as well. The main
reason for not having this feature included already is my laziness.
  I can't make myself to enter the data for all these >250 circuits.
By assuming that the average TTL circuit has 16 pins, would it mean
that 4000 pin names have to be entered...
However, if somebody out there have the energy for doing this for me
and sends it to me, would I happily add this feature at once and send
the new version to this guy as soon as it is completed. Well, for
your own sanity, check with me before you start typing, so you don't
do anything that's already been done...
Another feature could be postscript output of the chips, and thus
making it possible to print your own datasheets.
I could also add electrical data and diagrams, but that's not likely.
