Diamonds

The ultimativ Brick Game for Color Macintosh Computers
Works only on MacII-type Machines

1. Rules

First you have to collect all normal Color Bricks. Then you can collect the Diamond-Bricks.
When all Bricks are collected, you get into the next level.
At the beginning you should collect first all light blue Bricks, because later you
can't change the color of the ball to light blue.
Then you can change the ball's color by hitting a Brush-Brick.

To open a lock you must first get a key.

When you hit the Death-Brick, you loose one live.

There is also a Brick that changes the controls. It looks like two arrows.

See the Intro screen for information about the steering and the other controls.

3. Notes

If you have System 6.0.7 or later (7.0) you will hear multiple channels of sound.
Don't miss this!!

This game is ShareWare, if you keep it, send me $20 and you will receive
the latest Diamonds. I will also include the Level Editor, so you can modify
or add new Levels.
