HyperCD

(click here)

Version 1.000.003 inc. Creative Pacific Version

I wanted a CD player that didn't have a nag screen. I also wanted a CD Player that was small and always out of the way, I didn't want it to clutter up my desktop. I needed a CD player that stopped and started in exactly the same spot every time, I wanted all these things and more.

I asked HyperDyne 2000 and they wrote it for me (and you).

I hope you enjoy it and I'd like any ideas on making it more unique, but not necessarily more complicated if possible.

If you feel you've got any ideas or you'd just like to say thanks, drop an E-mail to my Compuserve address, 76702,1774. Remember the lates version of HyperCD can always be found on Compuserve.

If you've written something for MultiMedia, let's see it .... upload to your hearts content to the following forum.....

Just "Go SoundBlaster" at any ! prompt.

HyperCD was written for **Creative Pacific Pty Ltd** by the guys at **HyperDyne 2000 Software**, the ulitmate force in MultiMedia.

Tips:
Ensure that HyperCD & HyperCD.WRI always remain in your Windows directory.
Always load the MCI CD Audio driver in Control Panel
