

Legal Stuff:

This software is automatically protected by federal copyright law from the moment of its creation. The rights granted to the owner of a copyright are clearly stated in the Copyright Act, which is found at Title 17 of the US Code. Penalties include liability for damages suffered by the copyright owner plus any profits of the infringer that are attributable to the copying, or statutory damages of up to \$100,000 for each work infringed. The unauthorized duplication of software is also a Federal crime if done "willfully and for purposes of commercial advantage or private financial gain." Criminal penalties include fines of as much as \$250,000 and jail terms of up to 5 years.

WagVision is distributed as shareware, and has never been released as public domain. You are granted the limited license to evaluate this program for a period of 35 days. After the evaluation period you must either, discontinue use of this program or register it by sending \$7.50, please make checks payable to Chris Wagner, to the following address:

INTRODUCTION:

What is WagVision? WagVision was created with Objectvision... a front end for Paradox, dBase, Btrieve, and some other database formats for Windows! So, as you may have already guessed, ObjectVision is merely window dressing. WagVision's goal is to find useful situations for ObjectVision and distribute them for a minimal price to the general public.

WagVision is a nice way to store useful, necessary, and important information in a user friendly environment. WagVision has provided the means. It is up to you to unlock it's potential and make it work for you. If you're not using WagVision you're not seeing 20/20. Stop computing in the dark, get some vision, WagVision.

INSTALLATION:

If you've never installed a Windows application before in your life please read the following section. If you have installed Windows applications in the past, go ahead, jump right in. I do assume a minimal level of knowledge about DOS and Windows. You should be able to create directories, move files, run Windows and decompress archives. If you're clueless about these things please refer to your DOS, or Windows reference for help.

Now that I have scared you sufficiently, the installation process is really very simple. The following procedure needs to be followed to setup WagVision, ObjectVision Runtime, and MusicVision.

1. Place the ObjectVision Runtime files into a work directory.
2. Enter Windows by typing WIN at the DOS prompt.
3. From the Program Manager select FILE.
4. From the drop-down menu select RUN...
5. Enter the following on the Command Line:

C:\WORK\INSTALL.EXE
6. Hit return or click the OK button.
7. The installation process should begin in a few seconds. An ObjectVision Runtime icon should appear behind your Program Manager screen. You will be given the opportunity to specify the directory for ObjectVision Runtime, the default path is C:\VISIONR and the samples path is C:\VISIONR\SAMPLE. Just click install and the process will begin.

Unarchive all the MusicVision files into the sample directory. To install MusicVision make sure the ObjectVision group, or whatever group you are using, is active and follow the following procedures:

1. Select File from the Program Manager menu bar.
2. From the drop-down menu select NEW.
3. Select PROGRAM ITEM from the pop-up menu and select OK.
4. In the Program Item Properties menu enter the following information:

DESCRIPTION:	MusicVision
COMMAND LINE:	C:\VISIONR\VISION.EXE C:\VISIONR\SAMPLE\CDBASE.OVD
WORKING DIRECTORY:	C:\VISIONR
SHORT-CUT KEY:	[NONE]

Enter OK after all the information is entered.

NOTE WELL: To load MusicVision automatically the Command Line must include the VISION executable and the OVD file you wish to boot automatically. The VISION executable also has several icons imbedded into the program. To enter MusicVision, all that is necessary is to double click the icon.

What Do All The Neat Buttons Do?

- | | |
|---------|---|
| Bottom: | Repositions the database to the last record. |
| Clear: | Wipes all the fields in preparation for writing a new record. |
| Delete: | Removed a record currently displayed. ObjectVision is unable to display a record which has been deleted or marked for deletion. |

Exit Lookup: Return to the MAIN.

Exit Songs: Return to the MAIN.

List All: This function will show all the artist's and their albums in your database.

List Songs: Enters the SONGS portion of the database. From here you can list the songs on the album.

Insert: Writes associated ObjetcVision field values to a new record.

Next: Reads the next record in the database.

Previous: Reads the record just before the current database record.

Quit: Exit MusicVision.

View: Select the Group/Artist or the Album Title by double clicking your choice then click the VIEW button.

Store: Uses the current data either to insert a new record into the database file, or, if the record is being viewed, to update the current record.

Top: Repositions the databse to the first record.

Update: Writes current data values to the currently viewed record of the database.

Registering:

When you register your copy of MusicVision you'll receive a new copy of MusicVision, minus our awesome nag... advertising in disguise. You can call The Harvest BBS and download your own registered copy of MusicVision. If you hapen to live in an area where it is not cost effective to call at 2400 BAUD you may choose to keep the evaluation copy as your registered version or send us \$10.00 US dollars to mail you the registered version anywhere is the US or \$13 US dollars anywhere else is the world. We can also tweak your personalized copy WagVision to a limited extent. Only subtle changes to file format and the like can be made. Also, please remember to make those checks out to CHRIS WAGNER. Thanks a lot for even looking at the program, let alone these docs!
