

Cart Machine V3.0

The ultimate WAV file player

by Ron Burley - CompuTalking

Cart Machine is based on the metaphor of the classic radio station cart machine. The on-screen cart machine has five "cart" bays to play *.wav files. This is version 3.0 of Cart Machine and includes many enhancements:

Load Preset Combinations of Audio Files

Loop files

Use Space bar to "step" playing of files

Installation:

Copy the *.vbx files & VBRUN200.DLL to your Windows system directory, usually "C:\WINDOWS\SYSTEM".

Cart.exe can be in any directory. Use Program Manager properties to specify a launch directory. You will likely want to use the directory in which you store all of your *.wav files.

Instructions for use:

Just click on the number (1-5) to load an audio file. Use number pad or keyboard keys to play the files. (Number pad "del" key and keyboard "esc" key will stop playing of current file. "Enter" key will stop playing of all files. To chain, loop, or step files... just click the "Q" box next to the file title.

That's about it.

ENJOY... and PLEASE REGISTER THIS COPY OF CART MACHINE!

Please send \$20.00 to...
