

INSTALLATION INSTRUCTIONS (last modified JULY- 97)

Use these instructions for installing all Digital Graphics programs.

Windows 3.1 or 3.11

Place the disk in your 3.5" drive.
Then from Windows left-click File
Left-click Run
Type in A:SETUP or B:SETUP
(which ever is appropriate)
Press the ENTER key

Windows 95

Method # 1 -

Place the disk in drive A: or B:
Left-click the START button.
Left-click Control Panel
Double Left-click Add/Remove Programs
Follow instructions.

Method # 2 -

Place the disk in drive A: or B:
Double Left-click My Computer
Double Left-click 3.5" floppy A: or B:
Double Left-click SETUP (not SETUP.BIN)
Follow the instructions on the screen.

Note: On some systems it is necessary to reboot the computer before playing the game otherwise an "Integer Overflow" or "Divide by Zero" error or a similar error will take place. This seems to be due to a problem with "program remnants" left over from the installer program or other programs - not the game program itself.

If there are problems please contact me at RTCCPU@AOL.COM

Thanks for trying my product. Hope you enjoy it.

Rich Carman

NOTE - If you have a previous version of this game installed, just hilight it's icon in Windows and press delete.
Or uninstall the old game before installing the newer one.

Uninstalling - Read the file UNINSTLL.TXT on the program disk.
