Rules of the Game

The player must place cards from the pack of cards on a 4x4 board. The aim of the game is to get jacks, queens and kings to their rightful places. Kings must go in the four corners, queens must go between them and jacks must go below and above the kings. If a king is to be placed on the board and there is no kings place available the game is lost. Same goes for jacks and queens. When the board has been filled and the game not yet completed, cards, other than jacks, queens and kings can be removed from the board in singles or pairs if they sum up to ten.

Placing a Card

Simply click on an empty place on the board or drag a card from the pack of cards to an empty place.

Removing a Card

Click a card you want to remove. If the card is a ten it will be removed instantly, otherwise its borders will indicate the card marked for removal. Click on the second card you want to remove and if the two cards sum up to ten they will be removed instantly.
