Hold down the Option key while clicking on cells, row headings or column headings.

EXCEL SHORTCUTS & TECHNIQUES SELECTING CELLS

Make a multiple selection

Change the active cell in a selection

Hold down Command key while clicking on desired cells.

Select a range of cells

Hold down Command key while clicking on desired cell.

Click on cell, row head or column head at beginning of range, scroll to cell, row or column at end of range then hold down Shift key while clicking.

Extend a selection

Moving a Selection

Press Shift key down while clicking on desired cell(s), row heading(s) or column heading(s).

Hold down the Option key while pressing Return (selects next block of cells downward) or Tab (selects next block of cells to the right).

Hold down both the Shift and Option keys while pressing Return or Tab to move selection up or to the left.

USING FONTS

The following table shows the maximum number of rows and columns that can be viewed on screen and printed on a single page using various font and font size combinations. This table is based on the following assumptions:

- Column sizes: all worksheet columns set to Standard width (10 digits)
- Worksheet window size: full-screen (via zoom box) on a Mac SE.

Page SetUp: Default settings with the exception of Print row/column headings and Print gridlines (both turned off).

Some notes regarding the above table:

- 1. Must stretch window vertically to see specified number of rows on screen.
- 2. 9 point size not in System file (you must type in size); resultant font hard to read on screen.
- 3. You can easily get an extra print column by reducing margin sizes.
- 4. More columns can be viewed on screen and printed on a single page if narrower columns are used. As well, the number of rows and columns that can be printed on a single page can be increased by reducing the margin settings or by applying a reduction factor use the Page SetUp options "Reduce or Enlarge" (LaserWriter) or "Special Effects/50% reduction" (ImageWriter II). For example, to print twelve months of data on a single page using Helvetica Narrow, set the width of each monthly column to 9 digits, and set the width of the first column (usually a categories column) to 24. Lastly, set both left and right margins to 0.4"
