The two DA's in this file are help screens for SuperPaint.

They are both in a DA shell and should be loaded DIRECTLY into SuperPaint by holding down the option while clicking OPEN in the Font/DA Mover. Once loaded, the screens will be immediately available for assisting you in SuperPaint.

Your feedback is very important as I plan a series of graphic help screens on the most popular programs/ Let me know which ones you would like to see the most!

The only difference between the 512 and the + versions is the numbering of the DA's so as not to conflict with existing DA's in the System.

Good Luck, and let me hear from you
