

## **# 68            Aborting from the Custom Environment**

Written by Jud Spencer

Published Date March 2, 1988

---

Use Option-F to abort from the custom environment

---

If you ever find yourself at a splash screen in the custom environment with no active menus, you can drop back into the User environment by pressing option - F with the caps-lock key up. This will prevent you from having to reboot.
