

Dynamic-HourGlass Watch Replacement Instructions

Use a utility such as ResEdit to open the **finder** on the disk you wish updated. Open the **New Finder Cursor** and copy the **CURS** resource to the clipboard. Paste it in to replace the original **CURS**.

Open the **system** on the disk to be updated, scroll if necessary to find the system resource called **CURS**, then...open the **New System Cursor**, copy it and paste it in to replace the original system **CURS**.

That's about it...enjoy a new interesting sight to watch while waiting for things to happen on your Mac. Since the Mac uses two different watch cursors...one in the **system** and one in the **finder**...if you don't replace the watch in the system, it will creep back in every so often...so, be sure to paste in that one too!

Bye...
