Copyright notice

303tracker Version 0.11

Online English Guide - Contents:

1. Introduction of 303tracker

1.1 About this guide 1.5 Block diagram overview

1.2   Chapter 1.1

Date: 15-10-98 Version: 0.11

This guide is far from complete. I just tried to make it available in this

version and tried to make all information in these online help-files as

true and updated as possible.

The 303tracker online help contains a number of individual help-files;

these files are all in AmigaGuide format so you can also read them with

Multiview.

Jeroen Schellekens.

1.3   Chapter 1.5

This picture shows you the Diagram

block diagram of 303tracker

which gives a good overview

of the total functionality

of 303tracker.

There are 3 generators in

303tracker:

1. TB-303 Bassline

2. Drum Machine

3. Synchronising Sample

Then these 3 channels

route into a mixer with

individual volumes and

equalizers (Low Band &

High Band)

Then the mix is put into

a effects-list which

contains several effects

and can be placed in any

order.

At this moment, only these modules are available:

- 303sequencer

- TB-303 Bassline engine.

In future, the rest will be added.

1.4

How to order 303tracker? Date: 15-10-98 Version: 0.11

At this moment it's still not possible to order a version of 303tracker.

This due to the fact that 303tracker is not ready yet for a final, official

release 1.0.

When it's time to release version 1.0 of 303tracker, it will split into a

full commercial version and a demo version with a number of limitations and

features which are disabled.

The full version will be distributed by a number of publishers and

companies. The price of it is not determined yet, expect to pay around

$50 US dollars for it.

Until that time, a free 303tracker demo along with info are available at:

http://www.xs4all.nl/~jes303 Aminet: /mus/edit/303tracker.lha

www.xs4all.nl/~mjk303
