### 1.1 HyperCOM - the communication solution for pro's

Welcome to the new HyperCOM-Software

=====

Dear customers, with this new verison of the Hypercom-Software we again prove that our products are definately worth the money you spent.

The drivers you find in this archive are still in Beta state. In about 14 days from today, they're going to be shipped with the new HyperCOM cards. Please report anything that looks suspicious or faulty as soon as possible.

Most important differences:

hyperCOMx.device:

Against the 2.95B2 version, only internal atomic changes.

hyperPAR.device:

Against the 2.95B2 version, only internal atomic changes.

vmcresource.library:

The Amiga hardware detecktt function works a bit better now. There was also a small change inside of the clock port code. The old code produced by 5 customers randomly crashes after the use of the hyperCOMx or hyperPAR.device drivers.

Best regards,

Yours Harald Frank, VMC
