HyperCOM-NEWS

1.1 HyperCOM - The Communikations Solution For Pro`s

```
Welcome To The New HyperCOM-Software
====================================
```

Dear Customers,
with this new release of the HyperCOM software, we once again prove that
our products are well worth the money you spent for.

Again, we spent over 1/4 year of work and development in this new version.
We hope that these (once again improved) drivers and the long awaited
additional documentation will increase your joy with our products.

Nevertheless, the drivers included in this archive are still in BETA-stage
and they'll not be included with the new cards until about 14 days from
this time.
Please report anything that seems to be suspicious or faulty.

Most Relevant Changes:

ShapeShifter & Fusion:

Some customers reported irregularily stopping data-transfers when being
online with either Shapeshifter or Fusion.

This problem was solved.

Corrupted CONNECT-Strings With Miami:

After quite a long research the cause was finally found:
the problem only occured with certain cpu-boards.

This problem was solved.

Massive CRC-Errors with 68040-Systems:

Once again, following a long research the cause was found:
the problem also only occured with certain cpu-boards.

This problem was solved, too.

Most Important News:

HyperCOM 1 with BuddaFlash-Z2 Clock-Port:

The HyperCOM 1 is now supported when used with the BuddaFlash-Z2 controller's
onboard clock-port. The card is accessed via the usual "hyperCOM1.device"
being in the system's "DEVS:" directory.

HyperCOM 3+ with BuddaFlash, Budda and CatWeasel Expansion-Port:

The new HyperCOM 3+ is now also supported when used on any Budda or Catweasel-Z2
cards from Jens Schönfeld. To access the card, the "hyperCOM3.device" for
the serial ports and the "hyperPAR.device" for the parallel port will be used.
NOTE: specialised drivers for use with these Zorro-II cards can be found in a
separate archive on our internet pages, though they will be merged to a single
driver-archive with one of the upcoming new releases.

Kind Regards,

Harald Frank
