## 1.2 MpegA-Gui.Guide: How does it work?

Well, it is pretty easy to handle. When you start the Program a window opens with some gadgets:

LISTVIEW:

MpegA-Gui 2/5

~~~~~~~

A big Listview (relativ;)) shows you, what songs are found and ready to play. Well, be sure, you have really MpegFiles in the List. I don't check them befor the Gui puts them in the list.

#### ADD:

~~~~

If you press on 'Add' a FileRequester will occure and you can (multi) select all Mpeg.Files you want.

#### DEL:

~~~~

With Del, you can remove the selected entry from the list

#### CYCLEGADGET:

~~~~~~~~~~~~

A CycleGadget which tells the Gui how to play those songs. There are four options:

Play the actual File: Play only once the selected File Loop the actual File: Plays the selected File 5 times Play the whole List: Plays all Files just once Loop the whole List: Plays the whole List 5 times

I think 'Play' and 'Stop' are also clear... but note: The Commands 'Break' and 'Status' MUST be present in the CommandDirectory!

#### DoubleClick on an entry:

A doubleclick on an entry in the list and a little window will occure. In this window you can select the time where MpegA should begin to play or you can set the parameters to decode a Mpeg-File. Note: When you select 'Silence' your Amiga could stay for a while. When MpegA has completed, your Amiga will work as normal.

#### Help-Key:

~~~~~~~

If you press the Help-Key, MpegA-Gui will try to load the MpegA-Gui.Guide. So if you like this, be sure you placed the Guide either to HELP:{yourLanguage} or to the Progdir.

### 1.3 How to install this Program

Just place it where ever you like and start it. First MpegA-Gui asks for MpegA the Program and than for the Path. Then go to the PullDownMenu and select Preferences to switch some important or unimportant things on or off btw. change the Volume etc...

When you quit the Program, MpegA-Gui saves all Settings automaticly incl. the last used Position of the Window. If you have some Reports or suggestions for it, please let me now it. Do you have fun to translate some Catalogs or this damn DocFile to your own Language, please do it! And, of course, let me now it... Am I nosy?? No, I just want to know EVERYTHING...:\_))))))))

MpegA-Gui 3/5

## 1.4 MpegA-Gui.Guide: Short Description

MpegA-Gui should make the work with MpegA easier. And I am really to lazy to write Docs at this nice weather outside...

## 1.5 MpegA-Gui.Guide: Copyright

```
Copyrights:
~~~~~~~~~~~~
      This Program is absolutly free! Well, if you like to send me some
Money, Nuggest, FanPost, E-Mails.. Everything is welcome!!!!

Who can help me?
E-Mail: MC@MANIA.PROMETHEUS.DE
BBS : Write to User MC
```

But note! I am NOT the Sysop!!! Don't write to him..

### 1.6 MpegA-Gui.Guide: Errors...

I bet there are some.. but I am too lazy to test and find them... Let me now if you find some!

### 1.7 MpegA-Gui.Guide: Changes

MpegA-Gui 4/5

```

DELETE THE CONFIGFILE OF VERSION 1.0 BEFOR YOU ARE USING MPEGA-GUI!!!!

Version 1.21:

\_\_\_\_\_

- Doubleclick on a file changed
  - Slider for beginning of a file in Seconds
  - Filename for decoding. When a File is entered, the Gui will always decode a File then
  - Headertype for decoding
  - MaxFrequency for max Frequency at decoding
  - Play Mono. decoded File will be Mono
  - Silence: MpegA will only decode! Note: It runs much faster so it can be that your Amiga hangs for a while
  - Play (decoding or just playing)
  - Cancel...
- When Window is moved. It won't close and reopen anymore
- Settings for decoding will not saved anymore
- A Requester will be opened befor decoding
- A Requester opens when Mpega is finshed with decoding
- The 'DoubleClick-Window' will close when you either play a file, mpega is finished with decoding or you press cancel
- CheckBox added for 'Save Prefs when Quit' in Preferences. Note: The WindowSize and WindowPosition are also in the Config!

Some User of MpegA-Gui told me that they have problems to stop MpegA. Please check that you have the original Commands 'BREAK' and 'STATUS' in your CommandDirectory!

Version 1.12:

- Entry add 'Loop all Files' in cyclegadget
- Prefs: Slider for Max Decoding Frequency
- Prefs: Gadget for Filter
- Pattern for MpegA-Selection changed
- Little optical Bug fixed in Prefs

Version 1.8:

- Entries in Listview are sorted
- RemoveGadget doesn't crash now, when List is empty

MpegA-Gui 5 / 5

- Prefs: Gadget for Headertype (AIFF, WAVE)
- Prefs: Gadget for OutputFile
- Little 'optic-bug' fixed in menus
- A selected entry will keep cursor
- Added saveable and loadable Playlist
- Window changed to AddWindow. So you can drop now your Mpeg-Files directly to the window
- Gui can be iconified now with Exchange
- SizeGadget added
- Bug fixed (stop MpegA)
- DoubleClick on an entry will open a requester to jump to some positions in a  $\,\,\hookleftarrow\,\,$  File
