                    ® 1997 Lithium Systems
```

1.2   Important

```
                You really don't know?

   Warning! Leave enabled Miami's log  option.  Freedom Call will read
it for importing data. Never close a Miami's connection through "close
the window" boot! Use always "offline" option,  that  avoids  lack  of
information in Miami's log.

   * This version only support  integration  with  Miami, Termite  and
AmiTCP-IP integration its in Developing.  Please  anybody  send me log
file for this TCP-IP stacks.

   Freedom Call requer assign for you directory.

                Please read installation help
                      NOTE: If you is a good artist, create an  icon for the  Freedom
Call and sends to me, the best icon had won a REAL REGISTRATION.
```

1.3   I wonder how it works...

```
                How it works?

   This program was created to provide statistics for a perfect  time
and spends control on using Internet. It works in Workbench with  GUI
(Graphical User Interface), allowing easy data  manipulation  in  all
options.

   At starting this program, you will import Miami log's file data.

   This importation will generate all files on  Freedom  Call's  work
database directory, which will have your connection's data since  the
beginning of log's use until the present day.

   Files generated:

   Example:
   Freedom.01.1997  --> Regular and Irregular Calls, for month 01.1997;
   Freedom.02.1997  --> Regular and Irregular Calls, for month 02.1997;
   Freedom.03.1997  --> Regular and Irregular Calls, for month 03.1997;
   Freedom.04.1997  --> Regular and Irregular Calls, for month 04.1997;
   Freedom.Input    --> Calls of manual inputation;
   Freedom.Out      --> ShutDown Online Calls;

   After you import database  until  the  present  day,  you  may  run
more forms of Freedom's database atualization. Its  possible  to  use
generation option day by day, or to  use
                FreeEventMiami
                , a  program
developer for automatic atualization of freedom  database.  Its  real
time,  native.  With FreeEventMiami you  consult  all  informations
without  any  data  generation,  cause  this  program  atualizes  and
```

```
controlls Freedom Call's database.
```

```
                 Please read installation help for install FreeEventMiami
                    Note: Verify your configuration to optimize this option.
```

1.4   What it needs?

```
   Requirements
```

```
   * An Amiga AGA or ECS;
   * Workbench 2.0+;
   * MUI 3.X installed;
   * Miami 1.9.X + with log's option enabled;
   * 2 Megabytes memory (we recommend more);
```

1.5   What it can do?

```
                  Features
```

```
   This program offers the following options, supported on  general,
daily, monthly or anual refers, defined by the user:
```

```
   * How many Internet's calls you made;
   * The wholeness of time on line;
   * Time on line's average;
   * Cost of any call;
   * Cost average;
   * How many desconnections you made;
   * How many times the line fell off;
   * How many times your computer was reseted during a connection;
   * Date and duration time of larger connection;
   * Date and duration time of smaller connection;
   * Monthly control of connection's time limit;
   * First and last call in the selected consultation;
   * First and last date in the selected consultation;
   * Control of remaining time in the present month.
   * Visualization of exceeded conecction's time, based on your limit
     of hours;
   * Calls, time online and percentage by week's day;
   * It allows to visualize its last five Web's connections, shortcut
     window;
   * It allows to visualize its alls Web's connections;
   * It allows consulting about one period date;
   * Set your free hours;
   * Set your day of initial month;
   * Set number for ignore in statistics;
   * Select limits of your telephone company;
   * Possibility of visualize your telephone costs in current money of
     other country;
```

```
                    Menu Options

                    Windows Features

                    Configuration
```

1.6 How to use it?

```
                    Usage

   LAST CALLS   : This option allows  you  to  consult  its  last  five
                  Web's connections, with  date,  hour  of  connection,
                  time online and number phone.

   THIS MONTH   : It allows data's consultations on the average month;

   OTHER MONTH  : It selects other day, month or  year  for   statistics
                  consultation;

   GLOBAL       : It selects general statistics for all connections;

   PREFS        : Activates configuration's screen;

   ABOUT        : Shows program's informations;

                    Menu Options

                    Windows Features

                    Configuration
```

1.7 Menu Options

```
  Project
  '-->
      ABOUT       : Shows program's informations;

      ABOUT MUI   : Shows your MUI informations;

      ICONIFIED   : Iconified the program, facilitates the application
                    visualization without need to close Freedom;

      EXIT        : Exit of Freedom Call;

  Program
  '-->
      LAST CALLS  : That option allows  you  to  consult  its  last  five
                    Web's connections, with  date,  hour  of  connection,
```

```
                            time online and number phone.

     THIS MONTH  : It allows data's consultations on the average month;

     OTHER MONTH : It selects other day, month or  year  for   statistics
                   consultation;

     GLOBAL      : It selects general statistics for all connections;

     DATE PERIOD : It allows data's consultions on the period date
                   selected;

     ANUAL STATS : It allows data's consultations for year;

     MANUAL CALL : Input connections done from another local, as
                   work's local or a friends'house, allowing a real;

  Generation
  '-->
     FIRST GENERATION (MIAMI) : This option creates Freedom Call's
                                database after read Miami's log.
                                Other informations are generated by
                                FreeEventMiami. If you use FreeEventMiami
                                use this option only for first generation,
                                or for repair your base.
  Configuration
  '-->
     PREFS       : Activates configuration's screen;

  Help
  '-->
     MAIN        : To visualize HELP, "Opens in it makes up it main";

     USAGE       : It visualizes direct HELP in the screen on as to use
                   Freedom Call;

     HISTORY     : It visualizes direct HELP  the  information  on  the
                   story of the program;
```

1.8 Things that you need to know about FreeEventMiami

```
  FreeEventMiami tool
```

  This program was developed to allow a total integration with Miami,
allowing an exportation off all connections and occurrences in real
time to Freedom's bases.

  FreeEventMiami was developed in C, a program to be used by command
line, or inside a former shell, ex:

```
  FreeEventMiami -online             (or)
  FreeEventMiami -offline
```

  He works in the following way:

```
   Event Online:
 * When Miami connects in  Web,  it  creates  a  file  named
   "S:Freedom.Miami.Temp" with 40 bytes at  most.  It  will  contain
   informations about this connection.

   Event Active ou Passive Offline:
 * It will read the file "S:Freedom.Miami.Temp" and remove  it,  and
   generates in Freedom Call's  data  base  informations  about  the
   current connection.
```

That allows to you a real integration of Miami with Freedom Call.

You   can   increase   the   option   -remove in   the   execution   of
FreeEventMiami. It will remove Miami's log after add informations   in
data base.

```
   FreeEventMiami -offline -remove (Option only function in -offline)
```

Obs: If this option was used, you cannot use data's generation of
Freedom Call   anymore,   because   that   would   clear   its   base.   The
generation don't adds, but creates a new data base.

```
 * In case of lack of light in the middle of a connection, the  file
   "S:Freedom.Miami.Temp" only will be atualized in base at the next
   connection, generating informations for "Shutdown Online" field.

   (Warning)
```

Even   using FreeEventMiami, Miami's log should   be   enabled,
because the base will be updated with it's informations.   "Remove"
option of FreeEventMiami is used to eliminates the redundancy of
informations.

1.9   To do next time

```
   Future plans

 * To allow integration with AmiTCP-IP;
 * To allow integration with Termite TCP;
 * Possibility to maintain the program Online making connection's;
 * Comparison possibility among two periods;
 * Add new window "Check Costs";

 NOTE: If you use other TCP-IP program, send me log file, and o will
       for i developer another Freedom support.
```

1.10   Who am I?

```
   [My Information]

 Name           : Cristian Robert Gallas
 Age            : 23 years old
```

[Languages that I develop]

Amiga : SAS C 6.58, Storm C 2.0, Amos Professional 2.0;
PC    : Borland C++, Pascal 4.0, Delphi 2.0, PPL;
Other : Unix shell, SQL, and more;

[My Amiga's works]

* More than 20 doors for MAXS BBS;
* LT-Unix, Operating System Multiuser;
* Lottery, Lottery System;
* Sublime, Plug-in for Dopus 4.12, 5+;
* Freedom Call, Internet's Connections Manager;
* Surround.h, Cool include of C, more 60 new commands, Launched incomming;

[About Freedom Call]

Project    : Cristian Robert Gallas
Analyze    : Cristian Robert Gallas
Developing : Cristian Robert Gallas
Manual     : Cristian Robert Gallas

Language   : SAS C 6.57 with MUI librarys
Machine    : Developed in Amiga 1200/030 (50MHZ, FPU, MMU, 18MB, 2.1 HD)
```

1.11 Program's history

```
               The program's history

v1.00 (25.06.97)  - Internal beta release;
v1.01 (02.07.97)  - First public beta release;
v1.02 (07.07.97)  - Now Global Statistics is other button;
                  - Added first and last Call in statistics windows;
                  - Added date period in top label of statistics
                    windows;
                  - Added help guide in menu;
                  - Added "About MUI" in menu;
                  - Internal calculation Bugfix;
                  - Corrected Irregular and Regular inverted! Bugfix;
                  - Added window for calls and percentage by
                    day of the week;
v1.03 (11.07.97)  - Bugfix on second consult "Week Window";
                  - Generation was not supporting lines Reconnect Bugfix;
                  - Created
```

```
                      FreeEventMiami
                    , for use in Miami's fields,
                        it controls events "Online", "Passive", "Active";
                      - Added period date in top of "Week" Window;
                      - Now Date and Percentage of "Week" Window is bold;
                      - Key's calculation was changed;
v1.04 (17.07.97)      - Added Time Online in "Week Window";
                      - Now Freedom testing if exists for "Freedom:" Assign;
                      - Now Generation button its on Menu;
                      - Added new window "Last Calls", that display last
                        five calls;
                      - Bugfix in FreeEventMiami. Connection before
                        login 24:00 and logout after 24:00, new day;
                      - Added new window "Manual Call Inputation", for
                        input connections done from another local, as
                        work's local or a friends'house, allowing a real;
                        control of its supplier;
v1.04a (26.07.97)     - Now Freedom supports Catalogs, multi-language;
                      - FreeEventMiami modified, v1.02;
                      - Bugfix: Manual Call Inputation Window;
                      - Added new window "All Calls";
v1.05 (29.07.97)      - Bugfix: Week Window, problem only of 1.04a,
                        compiling wrong (FFP), now compiled (STANDARD);
                      - Bugfix: Manual Call Inputation;
                      - Added "Date Period" Window;
                      - Added option for set your initial day month;
                      - Added option for set one period for FREE calculation;
                      - Added message about "Wait Consultion Database...";
v1.06 (09.08.97)      - Bugfix on Generation option, problems
                        with blank space in the middle of telephone numbers;
                      - Bugfix in Free Hours calculation, after 23:00:00;
                      - Added test of date's format on "Date Period" window;
                      - Added [*] in phone number of free periods calculation;
                      - NOW Freedom Call works on database directory. Freedom
                        database is separate for month. First Generation is
                        more slow, but other options more MORE FAST;
                      - All consulting options where modified for supporting
                        separate database files. Even if you have many
                        years on your database, Freedom always runs all
                        consults FASTLY;
                      - FreeEventMiami modified to supports separated
                        database, V1.03;
                      - Added database folder in Freedom configuration, to
                        set the path of your database;
                      - Added gauge bar in "Global Statistics";
                      - Added test if exists database on First Generation;
v1.06a (11.08.97)     - Bugfix on Generation option;
                      - Now Global windows is the same of This Month window;
                      - Added percentage bar in Statistic Windows;
                      - Added days online in Statistic Windows;
                      - Bugfix in locale support;
                      - Time exceeded now is calculated in periods too;
v1.07 (22.08.97)      - BugFix in locale support;
                      - Recompiled on SAS C 6.58;
                      - Added label Logouts for separate statistics
                        in Statistics Window;
                      - Now all buttons in Freedom Call maybe GADGETUP;
```

```
                             - Internal bugfix in free hours routine;
                             - Rewrite internal routine about configuration;
                             - Added Status Call in Last Five Calls window;
   v1.07a (29.08.97)  - Added multi menu interface, with
                         graphical option;
                       - Added support to select phones to ignore;
                       - All Calls Status alined;
                       - Added two folders in prefs, Program and Filters;
                       - Register input information aligned when used
                         other catalog;
                       - Added "Anual Statistics" window;
                       - Now Freedom only report error on final of
                         first generation with message total errors;
   v1.08 (21.09.97)   - Bugfix on msg register in ignores phone;
                       - Bugfix on help main;
                       - Bugfix on anual statistics, inverted regular and
                         irregular calls;
                       - Removed white colors in back of "Last five calls"
                         and "Statistics" windows;
                       - Added all support of telephone cost calls;
                       - Added new folder "Cost" in configuration;
                       - Rewrite load configuration routine, more fastly;
                       - Bugfix on Cryptography routine;
                       - Added new requests in Register Request;
                       - Added fields Cost in all statistics windows;
                       - Added new option "return month" for "This Month";
   v1.08a (30.09.97)  - Now "All Calls" statistics is more
                         fastly and resizable;
                       - Anual Statistics is resizable;
                       - Bugfix on "Set as Default", now read limits;
                       - Statistics Windows only display after loading
                         stats;
                       - Otimizer internal arrays for use low memory;
                       - Bugfix on calculations calls less one minute;
                       - Added support for configure precision calculations;
   v1.08c (07.10.97)  - Otimizer internal arrays for use low memory;
                       - Rewrite internal cryptographys routines;
                       - Bugfix on menu of select day, month, year;
                       - Added day description in graphics status bar;
                       - Added new informations on locale support;
                       - Now Ignore Phones option is liberated for UNREGISTERS;
```

1.12 Gratitude

```
Here they are! These people turned possible this program's development:

* Xavier Billault for the support on MuiBuilder (GenCod developer)

* Stefan Stuntz (MUI developer)
* Eric Totel    (MuiBuilder developer)

  and SAS C authors developers...

Catalog translators:

1.13 Registration

```
                           "Only Amiga make it's possible"

      This program allows to Amiga's users to have a proper
         tool on controling they Internet's activities.

    If you utilize this and consider it a useful day by day
                 tool, contribute to the author.

      Doing this, you will allow the creation of Freedom Call's
            new versions, so as new Amiga's programs.

        By NOPAY REGISTRATION category you can use all
         this program, so registration isn't required.
       However, users that contribute will be included on
        REAL REGISTRATION category, which will receive
           all actualized versions at first by e-mail.

        REAL REGISTRATION (Only 10 dollars or 10 reais)

                      Deposit Account

    Bradesco Bank (Brazil), Account 7092/0, Agency 1491/0
                 Cristian Robert Gallas

                       By mail order

     Jose Luiz 1140, Montenegro, RS (Brazil), Cep 95780-000

      "Give encouragement to the developers and give yourself a
            chance to have good Amiga's softwares, with
                   more and more professional"

              Register Categories
                           "Registration is a free e-mail"
```

1.14   Installation

Freedom Call doesn't request complicated installation methods.

Freedom Call's install method

* Create a "Freedom Call" directory and place all extracted files
  inside it;
* Make Freedom assign, ex:

  Assign Freedom: DH0:Internet/Freedom "It's only and example"
  Insert in startup-sequence or user-startup.

* Run the program;
* Enters into "Prefs" option and complete the path of Miami's
  log file;
* Turn on base's data importation on "Generation" Option;

FreeEventMiami install method

* Copy FreeEventMiami for c:
  c:copy FreeEventMiami c:

* Select Shell in event Online on Miami
  Write on field : C:FreeEventMiami -online

* Select Shell in event Active Offline on Miami
  Write on field : C:FreeEventMiami -offline

* Select Shell in event Passive Offline on Miami
  Write on field online : C:FreeEventMiami -offline

  Obs: FreeEventMiami is not a shell, it's C program. Most Miami
       support C programs in this field, so you doesn't need create
       shell script.

* ... and that's it! You can use the program without problems;
