The OMG-VERSACOMM4-PCI provides four PCI bus RS-232 Async links for communication servers, point of sale (POS) systems, and other data collection devices. The onboard interrupt status port provides maximum Windows flexibility. The OMG-VERSACOMM4-PCI includes the 16554 UART, providing a 16 byte FIFO to keep your datacom applications running error free. The 16654 UART, featuring a deep 64 byte FIFO is optional for high speed applications. Windows 3.1x drivers are available for more than 4 COM: ports. Windows 95 automatically configures the OMG-VERSACOMM4-PCI, therefore drivers are not required. Drivers are provided for Windows NT.

A serial utility diskette is supplied with the OMG-VERSACOMM4-PCI which includes all the Windows and DOS tools necessary to verify the installation and operation of the board. Windows utilities include .INF files for Windows installation and also a Windows NT COM: Port Installation Utility. DOS utilities include a diagnostic program to verify card address and examine the UART, a diagnostic serial loopback test program and an interrupt driven DOS serial port driver.
