ChemOffice Drawing, Modeling and Information Management
For Apple Macintosh

MADE IN
USA

$1295

ChemOffice is the first desktop software to seamlessly integrate chemical structure drawing, molecular modeling and information management. ChemOffice is a bundled package including the complete line of Chem Series software products. ChemOffice includes ChemDrawPlus, Chem3D, and ChemFinder.

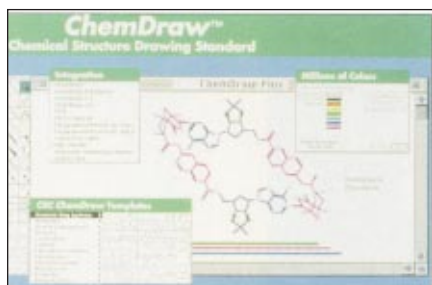

CHEMDRAW
STRUCTURE DRAWING

Integration between ChemDraw and word processors has moved beyond cut and paste. Now you can instantly edit chemical structures from within Microsoft Word and WordPerfect.

Draw structural formulas and reactions

Intelligent text and drawing tool

Predefined templates

ChemDraw Plus adds user-definable templates and full-color capability
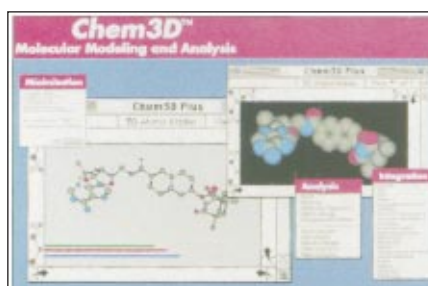

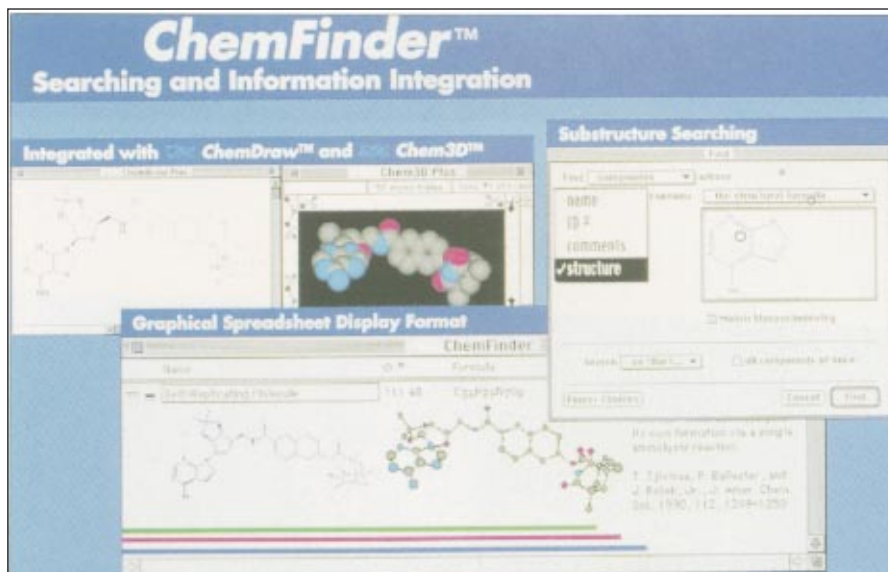

CHEM3D
MOLECULAR MODELING

Using Chem3D, you can analyze and visualize compounds like Crambin, which are stored in chemical databases such as Chemical Abstracts, Protein Data Bank and MACCS
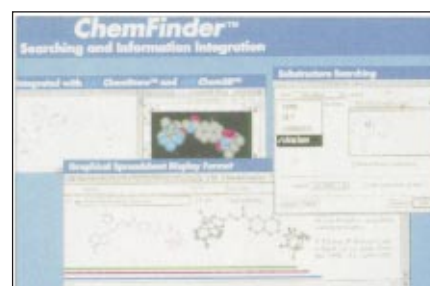

Build molecular models using any element

Real-time rotation and animation

Work with 5000+ atom models

Convert 2D structures into 3D models

Chem3D Plus adds MM2 energy minimization, molecular dynamics and full color capability

CHEMFINDER
INFORMATION INTEGRATION

Chemfinder can instantly associate chemical structures and 3D models with data stored in spreadsheets like Excel and databases such as FileMaker, 4D and Oracle, thereby tailoring these applications to manage chemical information.

Search network by substructure

Search and store chemical reactions

Search by any text or number field

Links with Excel, JMP, FileMaker and 4D

Sort by text or number

Calculate molecular and percent weight
