## Chapter 1

# SpringReleases

### 1.1 main

```
                Welcome to this Archive!  
All this software is  
Copyrighted © 1994,95,96 by  
Daniel Balster
```

```
ForcePens  
    system hack  
    Replaces the MagicWB daemon!
```

Workbench® is a registered trademark of ESCOM AG, Bochum  
MagicWB is a product of Martin Huttenloher

### 1.2 forcepens.node

```
                *** ForcePens 1.1 ***

```
Installation
```

```
Usage
```

```
Caveats
```

```
Known Bugs
```

---

---

## Requirements

### 1.3 intro.fp

This can replace the MagicWB daemon. It pre-allocates the specified pens before the Workbench® screen is opened.

### 1.4 install.fp

Just copy the binary to a location in your path (i.e. C:).

Then add this line to your S:user-startup file:

```
run >NIL: ForcePens 4 123 123 123 5 175 175 175 6 170 144 124 7 255 169 151 QUIET
```

Note: these values are the standard MWB colors you can find in the "Click Me For Colors" files in MWB distribution packages.

### 1.5 usage.fp

No need to describe, see [Installation](#) instead!

### 1.6 caveats.fp

MWB palette is not very eye friendly - ;=)

### 1.7 bugs.fp

### 1.8 reqs.fp

AmigaOS 3.0

68020 processor

MagicWB iconset
