---

Greetings, messages and contact info

## 1.2 What is new in this version - © 1994/1995 KiLLraVeN/MYSTiC

```

      .------.
      | New in version 1.4 |
      \-----/
  
```

The Commentistics have changed quite a bit. On a lot of boards that use KiLLER-Comment it appeared that the sysop had received the most messages, seems only logical. As a result the #-bars that graphically showed you the number of messages written to a certain person compared to the total messages always looked like this setup:

```

Sysop          #####
Person 1       ###
Person 2       #
Person 3
Person 4       ##
Person 5       #
  
```

In words: the sysop's bar would always be the largest and the other people in the list were lucky to have a bar with one '#' or two '#'s in it. Not very entertaining to look at and -more importantly- it had lost its functionality. Time for a change.

The sysop has been placed on an ivory tower, so to speak. He no longer participates in the calculation routine that makes up the length of the bars from other people. As a base for their bars the total number of messages will be taken minus the ones written to the sysop. A far clearer and more interesting image can be seen.

Does this mean the sysop's bar will always be 100%? No, the sysop's bar will now show the amount of messages written to him compared to the total amount of messages written. So if there were 500 messages written in total and 250 of those were written specifically to him, his bar would show 50%.

\*^\* BUG FIXES \*^\*

A rather dumb bug has been fixed. It has been there since day 1, but nobody noticed or didn't care to report it. Until last week. KiLLER Comment would simply not add up the number of messages written to the people in the KC-list. The total amount of messages always equalled the number of messages written to the sysop.

Some parts of KC needed to be rewritten in order to get it to work correctly with people who use a header in front of their KC-list. It now should work 100%. Please report any bugs if you find them.

That's all, if you wish to  
 contact  
 me for any reason, please do 'coz  
 it's always nice to know that someone has read this guide 8^).

```

-----
|   New in version 1.3   |
-----

```

I've built in an option to have KiLLER-Comment show a header file before it will display the list of users that can be commented to.

To do so, add the following tooltype to your C.info:

```

HEADER=<file>
e.g. HEADER=DOORS:K-Comment/Header.ANSI

```

When a header is chosen, the copyright message of KiLLER-Comment will be suppressed so you have more room for your header.

I've included a default header which was made by Zeus/MST/Pro^Arts!

```

*^* BUG FIXES *^*

```

And a bugfix in the Config Editor, it refused to put <3 character users in the user-list when you wanted to add a user. Pretty annoying. Nobody seemed to have any trouble with it, except Phantom/OVL who reported it.

### 1.3 What/Why is KiLLER Comment? - © 1994/1995 KiLLraVeN/MYSTiC

```

-----
|   What is KiLLER Comment?   |
-----

```

KiLLER Comment is number 1001 in the row of a [C]omment doors. But this is not just \*a\* comment door, otherwise I wouldn't have made it. I have some profound reasons.

Despite the fact that there must be over a 1000 different [C]omment doors, there is not one comment door that suits my needs. I have seen plenty of them but to me they all look ugly, have static interfaces, are as flexible as a log of wood and generally suck :-).

With this mind I've tried to make KiLLER Comment as smart and pretty as I can and I feel I have succeeded. I have never seen a comment door that works as simple as this one with a fair amount of so-called 'intelligence' and comes with a nice GUI.

What is this 'intelligence' I speak about you say? Well, all comment doors so far weren't able to see that if I typed "c kill" I wanted to comment to "KiLLraVeN/MYSTiC" nor were they able to see that if I typed "c amiga" I wanted to comment to the Amiga co-sysop. KiLLER Comment is able to detect this!

Another thing is security. Every new user was able to see which cosysops you had, but by giving every cosysop a security level, they will not see their names/jobs. And if there is only one (co)sysop they are allowed to see, they will not even see it is done via KiLLER Comment.

Also, per user in the [C]omment list there is a check wether he/she has got access to the conference that KiLLER [C]omment is called from, so it is impossible to write a person to someone in the wrong conference.

What I personally also dislike are comment doors that only fill like 25% of your screen. Not that you should put a lot of nonsense in your comment door, no, but KiLLER Comment puts an extra line between the names of the (co-)sysops if that's possible with the user's maximum numbers of lines he can handle on his screen. It's these kinds of things I miss in those 13-in-a-dozen [C]omment doors. That's why I made KiLLER Comment.

And oh, just like I first introduced cursor control in ConfScan, KiLLER comment also uses cursor control for selecting a user you can write to.

Anyway, I hope you will enjoy KiLLER Comment as much as I will. Go check out the features if you want to know more.

-KiLLraVeN/MYSTiC

## 1.4 Features of KiLLER Comment - © 1994/1995 KiLLraVeN/MYSTiC

```
-----  
| Features of KiLLER Comment |  
-----
```

Although the list of features isn't big, it's enough for a [C]omment door. Remember, it's only a [C]omment door.

### » GUI Config

A small program comes with it to set it up the way you want it as easy as possible. It's just click and save, you probably won't even need the keyboard but to fill in some personal info.

### » Security

Users with low access will not see all cosysops in the [C]omment list (esspecially useful with new users).

### » Known as

Very often your cosysops will have names that contain some sort of group name in it (like KiLLraVeN/MYSTiC), but it's not always that nice or handy to have that group name in the comment door (be it for cosmetic reasons, be it for some other reason). That's why you can enter an alias for each of your cosysops (and for yourself ofcourse) which will be used to display in the comment list.

### » Info

For every (co)sysop you can enter one line of information regarding

why he is in the comment list. This can be something like "Amiga Co-Sysop" or "Takes care of users / files / lamers".

» Comments

Most comment doors offer you the possibility to display a message after the user has selected someone to write to. This is generally something like "<name> says: bla bla". With KiLLER Comment you can make lines like this: "And there goes another message to <name>" or "<name> is cheering of joy!".

An example file with fortune cookies has been supplied.

» Cursor Control / Numeric entries / Default sysop

Selecting a user can be done with the cursor keys or by entering the corresponding number. A default sysop is also available (space).

»~Comment Statistics

KiLLER Comment keeps record of the number of messages written to every user and also knows when every user received his last message plus the user who wrote it to him. So with this information it is possible to create some nice looking statistics. These statistics can be viewed within /X or with the Config program.

» Optionable header file

If you like, you can have KiLLER Comment show a header before it displays the list of receptors.

## 1.5 How to install KiLLER Comment - © 1994/1995 KiLLraVeN/MYSTiC

```

-----
| Installation of KiLLER Comment |
-----

```

KiLLER Comment can be installed like any /X 3.x command, but please take notice of these tooltypes:

"KC-Config.info" - The icon of the GUI config program

- ACP\_LOCATION=<path> - Location of your ACP.info file.  
(eg. ACP\_LOCATION=SYS:WBStartUp)
- KC\_LOCATION=<path> - Location of the /X version  
(eg. KC\_LOCATION=DOORS:K-Comment)  
\*\* NOTE \*\* NOTE \*\* NOTE \*\* NOTE \*\* NOTE \*\*  
THIS SHOULD BE THE PATH TO THE DIRECTORY  
AND SHOULD NOT INCLUDE THE NAME OF THE  
EXECUTABLE! DON'T FORGET THIS! (HI JAKE)  
\*\* NOTE \*\* NOTE \*\* NOTE \*\* NOTE \*\* NOTE \*\*
- KC\_VIEWER=<full name> - External viewer for the Commentistics  
(eg. KC\_VIEWER=C:PPMORE)

- PUB\_SCREEN=<name>           - Optional(!) name of public screen that the config program will open on instead of the Workbench.  
(eg. PUB\_SCREEN=ECS\_PUB)
- "C.info"                   - The icon in your BBS command directory
- ACS\_STATS=<level>           - The minimum level required to view the statistical mumbo jumbo that KiLLER Comment is able to create for you (with 'C ?').  
(eg. ACS\_STATS=50)
- BBS\_LOCATION=<path>       - This should be the path to your BBS:, or if you keep your USER.DATA located somewhere else, the path to your USER.DATA.
- HEADER=<file>             - An optional header can be shown before the list of users will be build up.
- SEPARATOR\_LINES           - An empty line is by default put between two sysops if possible, but if you don't like that, you can also have a line of '-'s put between them. To do so, simply this tooltype.

I have found it very useful to put the Config program in my ACP command list. Maybe this can be useful for you too.

## 1.6 Usage in Ami-Express - © 1994/1995 KiLLraVeN/MYSTiC

```

-----
| Usage in Ami-Express |
-----

```

```

^_^ Selecting a user ^_^

```

Once installed, the usage of the [C]omment door is (and should be) real easy. You can simply start it with 'C' and you will be presented with a menu from which you can select a user to send some mail to.

However, like I said in the first words, KiLLER comment is a bit smart. If you enter a parameter after the 'C', you can skip the menu and still select the person you want to write to. For example, suppose you want to write a message to "Muad'Dib". We all know that this is a very lousy name to spell, so we can suffice by entering "C Muad" and Muad'Dib will be selected.

However, if you've got another cosysop in the list that is named Muad'Dab, KiLLER Comment will take the first name that has the part "muad" in it. This is just the way it goes, so if you want to write to Muad'Dab instead of Muad'Dib you have to enter another string that uniquely identifies Muad'Dab, for instance: "C Dab" :)

Another way to select a user is entering his or her appropriate number.

If you know that Muad'Dib is number 2 in the list, you can suffice by entering "C 2". And if you know that Muad'Dab is number 5, you can enter "C 5" to write to Muad'Dab. Real easy. If you enter a number that does not exist, you will be presented with the menu again.

But that's not all, let's say you got separate sysops (or cosysops) for different conferences; Amiga, SNES and PC. And suppose you want to write to the Amiga cosysop, you can simply enter "C Amiga" or "C Ami". Make sure the length of the string after the "C" is at least 3 characters, otherwise it will be marked as ambiguous and the menu will be prompted. And yes, that means that "C PC" will NOT work (haha!). But hey, there are 3 other ways of selecting that sysop. So don't despair (or enter "C p PC" if the text is "Cosysop PC").

^-^ Commentistics ^-^

The commentistics can be viewed by entering a question mark behind the "C". Couldn't be more simple. Just enter "C ?" and you will be able to view all sorts of statistic mumbo jumbo on your screen. Once you've seen the first screen, you can go to the next screen by pressing any key BUT Q, ESC can CTRL-C. Than the screen will be cleared in a fashionable style and the last page will be shown, containing the times and names of users who wrote last to the users in the Comment list.

^-^ Syntax Summary ^-^

For all you folks that didn't bother to read the upper texts, here's the brief list of all commands:

- C - A menu will be shown from which you can select a user
- C <text> - The <text> will be compared to the names of the users in the list and if that fails, it will be compared to the info of each user in the list. This comparing is case insensitive.
- C <#> - The corresponding name with the number will be selected.
- C ? - The commentistics will be shown.

## 1.7 The Config Editor - © 1994/1995 KiLLraVeN/MYSTiC

```

-----
| Config Editor |
-----

```

KiLLER Comment comes with a full C= compliant Guided User Interface (commonly known as GUI). With this Configuration Editor you are able to setup KiLLER Comment the way YOU want.

When you start the Config Editor for the first time, the sysop will automatically added as the first entry in the list of users that can be commented to. There should at least be ONE entry in the list or otherwise the user can't comment to anybody :-)

Okay, I think it is best if I just tell you what every button does and

how to do things. Here we go...

» Known As

You can enter an alias for every user that is in the list. By default the alias is the same as their real name in /X but you are free to change it. KiLLER Comment will still know their real name, don't worry about that. This function can be handy if you got a cosysop with a name like [-Bad Boy^Lamers-R-Us^I-Suck-] but you don't want to have that damn ugly handle in your comment door. Fill in whatever you like.

» Info

As usual you are able to enter one line of text that somehow describes why this user is put in the list of 'commenteers' :) You can put info like "Amiga Cosysop" in here or "Nuking is my nick-name!". You are free to use any colours in it, just enter them in the gadget like you would do in a text file. If pressing the ESC removes the cursor from the gadget, you need to TURN OF THE TEXT-FILTER OPTION IN YOUR PREFERENCES FROM YOUR AMIGA (Prefs/IControl)!!

Although you can only have like 34 chars on screen for info about that user, the Config Editor takes 80 chars. You are responsible for the length of the text. If you put 80 chars of text in it, it will look like a mess on screen in Ami-Express.

» Comments

A comment is a line of text that is shown to the user who just selected somebody. This can be a message like "Muad'Dib says: Thanks for nothing!" or "You can hear Muad'Dib shout with joy.". Or you can show him fortune cookie (max. 1 line!). An example file has been included.

This gadget wants a full path plus filename to a file that contains such messages. This can be a different file for every user or the same file for all users. The lines in the text file can contain anything you like where you can use '%s' to represent the name of the chosen user.

Examples: %s says: Thanks for your mail bud.  
You can hear %s scream with joy.  
%s is overwhelmed with tears by your gesture.  
Who is General Failure and why is he reading my hard drive?

Be creative!

With the [S] button you can select a file via a file-requester than rather typing in its full name.

» Req. Acs

For security reasons, you are able to set a minimum access level for every user in the comment list. This way you are able to have multiple cosysops and not let all the users know what they all do.

Imagine you've got a cosysop for the Amiga section, SNES section and PC section. You've got a lot of Amiga users, but you don't want them to know that you got a PC section. If they would use the 'C' door,

normally they would see that you got a cosysop for the PC section. "What PC section?" they will think. Or even worse, new users who use the door can easily spot your conferences. But not with KiLLER Comment, just make sure that the Amiga users have a lower access level than the PC users.

It's not perfect yet, but it's a start. I am thinking of a better way to secure this (it's possible, I just have to work it out a bit more).

By the way, cosysops with "C" access will also NOT see the other cosysop(s) (not even in the Commentistics).

» Commentistics

Not only in Ami-Express, but also in the Config Editor, you are able to look up the statistics that KiLLER Comment can create. The statistics are put into a file and that file is shown to you with the external viewer you specified. For your information, that file is always called T:KC\_Commentistics, does NOT contain any ANSI codes and is removed afterwards.

» Add / Del

Adding a user to the list is quite easy, select Add and you will be presented with a list of all your users in your USER.DATA. This may take a while, depending on your type (read: speed) of computer, hard drive and number of users in your USER.DATA. A new user will always be inserted at the END of the list.

To remove a user from the list, make it the active user (its name will be shown below the listview) and press Del. Easy as peanuts. The new current user will be the last user in the list.

You can not remove all users from the list. A protection has been built in so please try to do so :) It's impossible to remove them all because to who should the users in your system comment to?

» Up / Down

With those gadgets you are able to determine the order in which the users will appear a) in the list and b) on screen in Ami-Express. The most upper user will be the default sysop!

To move a user, make it the current one by selecting it and then press either up or down (repeatively if neccessary).

» Save

Guess what?

» &

Sorry? What did you say? :)

» Quit

You guessed it. By the way, there is NO warning if you changed

---

something and did not save it before quitting.

## 1.8 Greetings go to... - © KiLLraVeN/MYSTiC

```

      .------.
      | Greetings to... |
      \-----/
  
```

In no specific order:

```

          Exotic ^ UFOk ^ Easy Rider ^ I-GO ^ Galaxy
bObO ^ Famous'O'Hara ^ Zed ^ Green Beret ^ Arcade ^ Diablo
          XTD ^ Idea ^ XCS ^ Skol ^ Jake ^ aLLAH
          Zeus ^ nUp! ^ aXe ^ cASSeoPaYa ^ Psychlops
Rhino/Team Hoi ^ The Undertaker ^ The Phantom/OVL
          ... and to all my other friends ...
  
```

If you want to contact me, read  
this!

## 1.9 How to get in touch with me - © KiLLraVeN/MYSTiC

```

      .------.
      | Contacting me... |
      \-----/
  
```

It is preferred you contact me via my e-mail address:

```
klr@xs4all.nl
```

I can be reached on the following boards:

```

The Undiscovered      +31-229-541-442 (USR 33k6)
                      +31-229-544-442 (USR 33k6)
                      +31-229-544-331 (V34 28k8)

Last Outpost          +31-72-520-1182 (USR 33k6)
                      +31-72-515-7682 (USR 33k6)
  
```

Or try to find me at #amigascne (IRC).

## 1.10 History of KiLLER Comment - © 1994/1995 KiLLraVeN/MYSTiC

- 1.4.2 21-Dec-95 Altered the "Overall" remarks and added a ↔  
text  
for receivers with less than 5 messages. They  
are a bunch of losers ;-).
- 1.4.1 17-Dec-95 Rewrote a lot of KC so the HEADER option works  
without problems.
- 1.4.0 16-Dec-95 Made sure the total number of messages written  
was actually something cumulative ;-).  
REPORTED BY: [·tYRELL & sNAKE·] & Quartz/MST
- 1.3.0 04-Jul-95 Built in the HEADER option to show an external  
header before building the actual user list.  
Done in 10 minutes, thanks to modular coding.
- 1.2.0 03-Feb-95 Fixed the version numbers in the executable ;)  
REPORTED BY: MOTiVE POWER
- You can now enter an asterisk behind the name of  
the person you want to write to (ie. C MUAD\*  
REQUESTED BY: MUAD'DiB
- Made the percentage bar in the commentistics a  
relative one, like in KiLLER-Baud. The user with  
the most messages will always have 100% and the  
rest will be a relative representation to that  
user.
- 1.1.0 26-12-94 KiLLER [C]omment now checks wether the persons in  
the [C]omment list have access to the current conf  
that KC is called from. If not, that person will  
not be put in the list.  
REQUESTED BY: Quartz
- 1.0.5 02-11-94 You can now have lines used as a separator on screen  
instead of a blank line.  
New tooltype: SEPARATOR\_LINES  
REQUESTED BY: JAKE
- 1.0.4 20-10-94 Added an access level check. If a user does not have  
the minimal required access to actually see a cosysop  
in the Comment list, than that user will not see  
that cosysop. See also  
History Gui  
.  
REQUESTED BY: TYCOON/MYSTiC & MUAD'DiB
- 20-10-94 The program now attempts to write messages with the  
external "E" door (if any). This makes it more  
flexible for sysop, allowing them to have external  
"E" doors installed, like the one from 5D and the  
external one from Tycoon/MYSTiC (/X-Fido).  
REQUESTED BY: TYCOON/MYSTiC
-

- 1.0.3 15-10-94 A bug in the "Commentistics" routine caused a guru when there were users with no messages. A division by zero was the result -> guru :( Fixed that.
- 1.0.0 14-10-94 First initial release to friends.

## 1.11 History of KiLLER Config Editor - © 1994/1995 KiLLraVeN/MYSTiC

- 1.0.3 14-02-95 Fixed a bug that caused all users with a name shorter than 4 characters to be left out of the user-list when you wanted to add a user.  
REPORTED BY: PHANTOM/OVERLORDS
- 1.0.2 20-10-94 Restyled the GUI bit. I removed the "Show Comments" gadget because I found it not useful. Removed the code also (ofcoz, but you never know who reads this :) ).
- 20-10-94 New option: [ Req. Acs ] (Required Access)  
You can set a minimum access level per user in the list. Users with an access level lower than that level will NOT see him in the [C]omment door. This enables you to let even new users use this door and not reveal to them that you (for instance) have an Amiga cosysop and/or SNES cosysop and/or PC cosysop.  
REQUESTED BY: TYCOON/MYSTIC & MUAD'DIB/DLT
- 20-10-94 New option: [ Clear Statistical Data ]  
With this option you can clear all statistical data that is kept for every user. This means that the total # of msg-s, last msg date and user will be set to 0 (or None).
- 20-10-94 Another restyle: [ Save ][ & ][ Quit ]  
Save -> Saves the (new) prefs  
& -> Save and Quit  
Quit -> Quit the program
- 20-10-94 Another restyle: I changed the placed of the [ Add ] [ Del ] [ Up ] [ Down ] a bit, to make it a bit more logical.
- 1.0.1 14-10-94 First bug found in 3 secs by Muad'Dib :) If you selected "Commentistics" from the GUI Config and there were no messages written yet, a crash was the result (division by zero). Fixed it.
- 1.0.0 14-10-94 First initial release to friends.
-

## 1.12 Example output - From Undiscovered BBS

These examples were taken from The Undiscovered BBS, sysop Muad'Dib presiding. Admire his statistics and behold his staff :-). All screens are copied without an extra blank line between the members in the list, it looks better this way in a guide.

- Selection screen -
