# Tailor Testimonials

## My colleages are green with envy

I use Tailor mainly to edit graphics produced by other applications. Typical operations include adding labels, repositioning various parts, and deleting unwanted parts. A recent example involved diagrams produced by an old inflexible FORTRAN program. I used Tailor to remove parts of the plots I did not want, and to combine

several plots into a single EPS file. Without Tailor, I would have had to rewrite the FORTRAN program! Tailor is an absolutely wonderful piece of software. My colleagues are green with envy when I show them how I can fix problems easily while they have to get out the old white-out and glue!

*Magnus Nordborg, Dept of Biological Sciences, Stanford Univ. magnus@fisher.Stanford.EDU*

## Tailor swallows the heaviest PostScript files from the most exotic sources

Two Tribes is a combination of an advertising agency and a scientific consultancy, with high quality standards. Thanks to Tailor

and NEXTSTEP, we can work with PostScript files from our PC/Windows-based customers and from various TeX-systems. Our projects typically involve complex color graphics, huge images and PostScript documents up to 200 pages. Tailor swallows them all! Fixing annoying rendering errors generated by poor PostScript drivers is now an easy job. The ability to retouch PostScript data really makes Tailor a bargain!

*Michael Burgstahler, Two Tribes Informationsgestaltung, Germany*

## Tailor is absolutely a great   program

We used Tailor on a recent mailing to enhance the final documents.

The mail-merge letters were generated on a Macintosh, and saved as PostScript files. These were transferred to NEXTSTEP and loaded in Tailor for hand processing for accuracy and proper spacing of the address information. Without Tailor we would never have obtained the quality look we wanted.

## Tailor brings us an important competitive advantage

As a PostScript service bureau, our focus is on flexibility. With Tailor we can do things that we and our customers long considered

impossible. And it saves us a lot of time too. These benefits give us a clear advantage in the market. Its hard to imagine living in todays PostScript world without Tailor!

*Dag Hasvold, Falch Hurtigtrykk as, Norway*
*boots@dream.falch.no*

## Tailor has simplified my life considerably

We are using Tailor every day. For our scientific publications we need to edit and combine PostScript figures produced on different platforms, by different applications (from Mathemetica to Matlab), and from different sources (coworkers and students). Before installing Tailor we had to modify the PostScript source code by

hand.   Tailor has considerably improved our productivity!
