

BookMarkManager 2.1

Author:
email:

Shareware Version
Edgar M. Hofer
Edgar-Hofer@msn.com

With this tool you can convert your
MS-IEEXPLORER-FAVORITES to **NS-NAVIGATOR-BOOKMARKS**
and **VICE-VERSA !!**

Installation:

There is **no extra setup**, copy the files from the zip to any place you want and simply start the exe-file or make links of your choice. If you miss a fine setup-code (making icons - where YOU will move it away - and so on...), remember:

You saved very much time for not downloading my setup-stuff <bg>

Release Notes - Version 2.1:

Some Bugfix for correct reading of „bookmark.htm“-File. (Special Characters like Slash or Backslash will be converted to: !)

Converting-Special Options

a) Generate new Subfolder

If you choose this, the destination will NOT be overwritten. Instead the hole source will be **inserted** in the destination as a new branch.

b) MERGE both together

This will UPDATE BOTH (NS-Navigator and MS-IE Explorer) with the unique links of each other. After choosing this function, you will have the same, merged URLs in your Bookmarks and in your Favorites.

Registering:

Please look in „register.doc“. Please use Albert's Ambry Online-Registration-Service via the Internet. **You can use the unregistered Software only 10 times before it is disabled!**

Updates/Support:
