IconMini

Configuration

Click on the configuration option you require help on.

The configuration dialog box for IconMini v1.2. It has a title bar with the IconMini logo and the text 'IconMini v1.2 Configuration'. The dialog is divided into several sections:

- Position:** Four radio buttons for 'Top Left', 'Top Right', 'Bottom Left', and 'Bottom Right'. 'Bottom Left' is selected.
- Direction:** Two radio buttons for 'Horizontal' and 'Vertical'. 'Horizontal' is selected.
- Display Icon Title:** Two radio buttons for 'Cursor On Top' and 'Do Not Display Title'. 'Do Not Display Title' is selected.
- Delay Timers (milliseconds):** Two input fields. 'Icon Refresh' is set to '20' and 'Title Display' is set to '500'.

At the bottom of the dialog are three buttons: 'Ok', 'Help', and 'Cancel'.

There are two 'timers' used in IconMini. The first is the Icon Refresh timer which specifies the number of milliseconds before the icons are refreshed. The second is the Title Display timer which specifies the number of milliseconds the cursor must stay on an icon before the title is displayed.

Two options in the Display Icon Title group on the configuration screen provide for:

Displaying the icons description when the cursor remains on top of a minimized icon after a specified period of time.

No display of the icons description is to occur.

The corner of the windows desktop that the minimized icons will be placed is specified by selecting the appropriate option in the Icon Display Position group on the configuration screen.

The Icons, once minimized, can be placed horizontally or vertically by selecting the appropriate option in the Icon Display Direction group on the configuration screen.

Saves the selected settings to ICONMINI.INI, and exits the configuration screen.

Displays the About dialog box.

This closes IconMini and unload it from memory.

IconMini

Overview

IconMini is a Windows desktop utility designed to reduce the clutter of minimized icons.

It accomplishes this by organizing the minimized icons on the standard Windows desktop either horizontally or vertically, into a selected corner of the desktop.

When organizing the icons the icons titles are hidden. For most users this may be welcomed, but for those that still like to know what the title of the icon is, IconMini can be set to display the title when the cursor rests on the icon for a specified length of time.

Additional features include Windows Exit/Restart/Reboot, and to Run a Program.

The program has been written in Visual Basic 3.0.

Any suggestions on how to improve it will be appreciated (A future C++ version is envisaged but will require sufficient 'registrations' to enable the purchase of a C++ compiler to occur).

IconMini

Registration

Registration costs \$15 and includes:

- o A license to use IconMini after the 30 day evaluation
- o A disk with the latest version
- o Notification and discount on future major upgrades
- o Support via postal mail (and E-mail if available)

----- PAYMENT OPTIONS -----

Payment can be made by international postal money order, Australian bank cheque or cash.

Payment by cheque must be from an Australian Bank in Australian dollars.

Site licenses: a site license for IconMini entitles an organization to receive one copy of the distribution package and duplicate the distribution disk for the specified number of computers.

ICONMINI REGISTRATION FORM / INVOICE

IconMini

Run Program

Allows the selection of a program to run either by manually entering the program details, or by browsing the files attached to the computer.

Click on the area you require help on.

Identifies the program to be run. Using the browsing facility this will be any COM, EXE, BAT or PIF file.

Any parameters required by the program can be entered here.

Displays any COM, EXE, BAT or PIF files in the currently selected directory on the currently selected drive.

Selects drive.

Displays the directories available on the drive. Double clicking on the required directory will select it. Until it is selected the Files will not be displayed.

Runs the selected program with any parameters that have been entered.

Exits the Run Program Dialog.

Defines filter for files displayed in Files box. Selection can be by using the dropdown list, or by manually entering filter pattern.

Displays the currently selected path.
