Overview

INI 'OL Editor is designed to make editing INI files such as WIN.INI, SYSTEM.INI and others simple and quick. The button bar allows for quick loading and saving of INI files. INI 'OL Editor also supports drag and drop from Windows File Manager.

Most users will set up File Manager association for INI files to automatically start up INI 'OL Editor.

Editing

Click on a line to change and click on the edit button or double-click on the line to bring the line into the editor boxes at the bottom of the window. Make any changes necessary and hit return to save the changes.

The Perfect Price Shareware

Business Link Northwest

Business Link provides software to individuals and organizations under the "Perfect Price" Shareware plan. The software is owned exclusively by Business Link Northwest and users of the software are required to register the software in order to use it for longer than 30 days.

A registration fee of any amount will provide you with a registration number which will get rid of that annoying "Nag" screen when you start the program, provide you with information on upgrades and help support the shareware concept.

Menu information

File Menu

Open, Save, Save As

Use these functions to open new ini files, to save ini files with the same name or save the filename with a different name.

Exit

Quit INI 'OI Editer

System.ini, Win.ini, Last Files Opened

These are quick ways to access the most common files opened with the editor.

Edit Menu

Cut, Paste

These options, also available from the keyboard, copy lines from the editor section or the highlighted line for quick pasting into the editor or other Windows programs.

Options

Color Back, Color List, Font

Use these options to change the look of the window and text boxes.

Quick File List

The two options available here are show and update. Show disables the listing of the last used files on the File menu. Update allows or freezes the list of last used files on the File menu.

Hint: You may want to load up your most common edited ini files and then turn off the update function to have a permanent list of those files.

Save Backup

Turning this function on saves original ini files with the extension "in~"

Help

Help, Search

Takes you to the help file [contents](#) or search screen.

About, Register

Shows you the current version of the program and allows you to re-register or view the registration process again.
