Wiggle Rockers

This filter lets you randomly reposition only the rocker points of a selected shape.   Apply this filter gently to create nice, wavey uncertainty to your shape (it's particularly effective on stroked shapes).

The amount slider lets you vary the randomness from -100% to 100%.   At 100%, a point may be moved a random amount that can be as much as 100% of the maximum dimension of the shape's bounding box.
