

## Wiggle Inbound

This filter is a variation on Wiggle Rockers. It will vary only the inbound rocker for each segment. This can be used to make the Wiggle Rockers effect more subtle.

The amount slider lets you vary the randomness from -100% to 100%. At 100%, a point may be moved a random amount that can be as much as 100% of the maximum dimension of the shape's bounding box.
