Horizontal Twist

This filter will twist your artwork around a horizontal axis in 3D.

The Twists slider indicates how many times you want to twist the shape around.   Any value from 0 to 25 (including fractional values like 0.5) will work.   Each whole twist is 360°.

The Depth slider lets you control how much 3D effect you want.   At 25% (the default), the shape is extended by 25% of the radius in the Z direction.   The best way to see the effect of this slider is to vary it while having rotated the shape into 3D in the preview image.

The MiddleShift slider lets you position the horizontal axis up or down on your artwork.   At 0%, it's exactly in the middle of the shape; at 100% it's at the top.
