

The CERN Imagemap Format

• NOTE: The CERN format does not allow ovals to be specified in its “.map” files. Therefore, when you are editing a GIF with WebMap, and you have CERN specified as the default format, all ovals will be constrained to true circles.

Keyword	Coordinates	URL
rect	(x,y) (x,y)	your_url_here

circ	(x,y) radius	your_url_here
------	--------------	---------------

poly	(x,y) ... (x,y)	your_url_here
------	-----------------	---------------

Rectangles are specified by their left, top, right and bottom coordinates.

Circles are specified by a center point and a radius.

Polygons are specified by a list of vertices.
