Known horticomings

Using the METER menu while a METER dialog is already on screen may not work on some Macs.

METER is not fully optimized for PowerBook use. Your hard disk may be activated by certain of METER's dialogs, or for periodic saves; however, it will not spin up the disk when the PowerBook is idle. Next version will never needlessly awaken the hard disk. METER does not record sleep times.

METER records and displays elapsed times only, not multiple start-stop times. For example, it will not show that project "Bob" worked in Word from 10 till 11, then from 1 till 1:30, then 4 till 5. It will just record Bob's 2.5 total hours use of Word. This may be added as an option in later versions; for now it is excluded for the sake of efficiency.

Shortcut keys will not work with some WorldScript Asian input systems. Use the menu instead.
