

About this patch...

This patch cannot work properly while virus detection software is running. Please make sure that you have disabled any virus detectors before applying the patch.

This application will patch Find File (found in the Apple Menu Folder inside the System folder) so that Find File automatically quits when you open, print, do a get info on, or open the folder of any found items.

This patch is intended to be used only with Find File version 1.1.1 (from System 7.5 update 1.0). The patch should work with non U.S. Find File (in fact the patch was created using the french version). If you have a newer version of Find File, please let me know !
