

File Settings:

List Settings - Select the font and size for the text in the list by using the pop-up menus. Check the "Larger List Area" check box if you'd like a slightly larger list to accommodate longer item names or a larger font size.

Default Font Info - Select the font and size for text items that are added or have no style of their own (pure TEXT with no associated "styl").

Sorting - Check the "Sorted List" check box if you'd like the scrap items to be sorted. Choose the sort order with the two radio buttons.

Allow Text Edit - Check this check box if you'd like to be able to edit or add text items to this scrap file.

Window Color - Click within the frame below "Window Color" to change the color of this window.

Type Priority - If one scrap item contains more than one of the displayable types (PICT, TEXT, snd, or moov) you might wish to set which has the priority for display when you get to that item. Just use the popup menus to choose the priority of each type. 1 is the top priority and 4 is the lowest priority.
