There exists a FileMaker Pro runtime program and template called "Time Track DB" that works with exported TimeTracker data except for data from the Projects and Expenses column.   It should be posted to your BBS if you found TimeTracker there.   If not, it's at ftp.maui.com/pub/mauisw.

If you have designed a database template, and you'd like to share it with others, please send it to us.   Feel free to also include a "Read Me" file about yourself and/or your company.
