

Installation

Installing MacNanny is very easy.

First, drag the MacNanny application to your hard drive. We prefer to keep MacNanny in our Applications folder.

Second, you will need to drag the MacNanny Help file to your system folder. Determine which system version you are running, and then follow the instructions below.

System 6

If you are using a version of System 6, simply drag the Help file to your System folder.

System 7

If you are using a version of System 7, drag the Help file to the Preferences folder which is inside the System folder.

You are now ready to run MacNanny
