

The palette get file dialog

If you hit the 'Load' button from the color reduction options dialog, the palette get file dialog is displayed. This is a standard dialog for selecting the GIF or Photoshop CLUT file containing the palette you wish to load. It will alternately display a list of GIF files or a list of Photoshop CLUT files depending on whether the 'GIF file' or 'CLUT file' radio button is selected.

Select the file you wish to load a palette from by double-clicking it in the file list or hitting the 'Open' button while the file is highlighted in the file list. You may also cancel loading a palette from the palette get file dialog, and you will be returned to the palette options dialog without canceling the entire saving process.

If you select a GIF file containing multiple palettes the next dialog that will be presented is the GIF palette picker dialog. If you select a GIF file containing only a single palette or a Photoshop CLUT file the next dialog will be the fixed palette color reduction options dialog.
