EIMS Server 2.2.1 to 2.2.2 patch

This patch will only work on the release version of EIMS Server 2.2.1. If you are using EIMS 2.0, 2.0.1, or 2.1 you will need to update to EIMS 2.2, and then update to EIMS 2.2.1. If you are using EIMS 2.2 you will need to update to 2.2.1.

Changes from 2.2.1 are:
• Fixed an SMTP denial of service attack.
• Fixed a crash while quitting EIMS.
• Fixed a crash while handling Auto Replies, introduced in EIMS 2.2.1.
• Fixed a bug where a new message being added to an outgoing mail queue could be corrupted under rare circumstances.
• Fixed a bug where renaming a group would write to memory location 0.
• Fixed garbage address showing with SMTP AUTH login.
