IMPORTANT INFORMATION ABOUT DEMOS & SOFTWARE:

---

Software provided on this CD-ROM has been compressed. All software must be uncompressed and installed onto your hard drive. If you are unable to play game demos or go online, or if movies play back poorly, you may be short of memory. Quit other applications to free up more RAM and continue.

If you are using OS 9, you should set your browser's memory partition to at least 20MB. Memory is automatically managed in OS X, so this is not a requirement in OS X.

---

Trouble-shooting & Memory problems:

---

If this CD interface fails to launch, there are several things you can do to remedy the problem:

OS 9:

---

- 1) Turn on the Virtual Memory using the Memory Control Panel and set your total memory to at least 32MB. If you are using MacOS 9.1 or later this is the recommended solution.
- 2) To change memory allocation for a program, click once on the program's icon to select it, choose Get Info from the File menu, and set the Preferred Size to the desired amount.
- 3) Make sure you have enough memory to open the application you wish to

run. To check your available memory use the "About this Computer..." menu option under the Apple menu while in the Finder. To check how much memory an application requires, find its icon in the Finder, then press Command-I to get info. On the memory screen of the get info dialog, you can see the minimum memory required and increase the game's memory partition size.

4) Quit any applications you are not current using in order to free up memory for the software on the CD-ROM.

#### Minimum Classic System Requirements:

- 1) Mac OS compatible computer (with a Motorola Power PC Processor).
  - 2) System 9.2 or newer.
  - 3) 14 inch color monitor with the capability of displaying 256 or more colors at a resolution of 832 x 624 pixels.
  - 4) 8X CD-ROM drive.
  - 5) QuickTime 4.
  - 6) 20 MB of free RAM. At least 64 MB of physical RAM is recommended.
- To see how much available RAM your computer has, choose "About this Macintosh" from the Apple Menu.

#### OS X:

---

- 1) Download and run the free utility MacJanitor 1.2 or later. This program runs OS X native scripts that normally run at midnight throughout the month. [http://personalpages.tds.net/~brian\\_hill/macjanitor.html](http://personalpages.tds.net/~brian_hill/macjanitor.html)
- 2) If you are having problems with opening archives, download and install the latest free version of Stuffit. <http://www.stuffit.com>

#### -44 or -46 Error Message

---

When you attempt to install a file from the Macworld Resource CD using some browsers, you may see an error message saying "the disc is locked".

To bypass this message, click OK, then save the file where you want it.

Please see the Help section on the disc to learn how to make this error message disappear permanently.

---

Extracting and using Mac OS X software:

Software created for Mac OS X is usually provided in a format specific to Mac OS X. The "tar" and "gz" file name extensions signify that the file is compressed into an archive. Use StuffIt Expander (available from Aladdin--<http://www.aladdinsys.com>) to extract these files.

Files with a "dmg" file name extension are disk images. To use them, open Disk Copy from your OS X Applications:Utilities folder, then drag and drop the file onto the Disk Copy window.
