

Place Send ASCII Postscript XTension in Quark 3.1 folder.

Launch Quark 3.1

Under the File menu highlight SEND ASCII POSTSCRIPT  
This will put a checkmark > next to this command.

About the Send ASCII PostScript XTension:

The Send ASCII PostScript menu item (File menu) enables you to select the format in which QuarkXPress outputs document pages when printing to PostScript printers.

Unchecked is the default selection; check Send ASCII PostScript if you want PostScript page descriptions output without any binary data.

The Send ASCII PostScript setting is an Application preference, rather than a document preference.

This XTension will work with QuarkXPress version 3.1.
