EZ-Dock Quick Guide

A new utility to make image projects a little easier to deal with.

Z-Dock does make life easier if you work with many

different pictures or images in your projects. EZ-Dock provides a place to store them. This may be temporary or longterm. EZ-Dock can store up to 24 images or pictures and it is only limited to the amount of Memory and Harddrive space installed in your computer. EZ-Dock is easy to handle, because it takes advantage of the Macintosh OS Drag and Drop support. This comes with any System Version above 7.1.
So if your Macintosh Operating System is above version 7.1 then EZ-Dock is for you!

You can find out which System Version you are running on, by choosing About this Computer or About this Macintosh under your Apple Menu.

Why Register:
Every program takes quite a amount of time to develop. Many hours and days are spent to provide you with a easy to understand interface and to help you with the tasks you are wish to acomplish.
EZ-Dock has some limitations in the unregistered version. There are a Shareware Reminder Dialog, which will show every time EZ-Dock is launched. EZ-Dock images can not be saved into the EZ-Dock Database if it is not registered. What means, that EZ-Dock will keep your images in memory only and after you quit EZ-Dock all EZ-Docks are cleared. EZ-Dock is only US $ 2.00 and your shareware fee is a important part of this process, without your support there are no shareware programs and the try before buy shareware system will be gone. So, please register and support shareware.

You can register EZ-Dock by choosing Register under the Apple Menu in EZ-Dock.

Thank You !
