Welcome to PCBoard OverView!

PCBoard OverView is designed for PCBoard SysOps who run Windows on at least one node of the network. Here are some of the main features:

- * Monitors selected nodes for lockups.
- * Displays caller status of active nodes.
- * Displays last caller status of ready nodes.
- * Displays PCBoard specific instance lists.
- * Generates various user-defined bulletins.
- * Convenient edit/display box.
- * Colorful, lucid display.

Requirements

Windows 3.1. Color monitor and Soundblaster recommended.

Operation

The first time you run OverView, it presents a dialog for choosing vital paths/names. Anytime you change your PCBoard setup in a major way, the dialog is presented again.

If you cannot locate the correct paths/names, you can quit the startup by selecting abort.
