

TITLE: "Autumn Harvest"

SOFTWARE USED: Lightwave 5.0 and Photoshop 4.0

This image took me about 15 hours to model and texture, and another 3 hours to render. It has 444,812 polys, 34 surfaces, 13 images, and 48 objects.

This is one of my most complex scenes to date. Basically what it is, is a view of the backyard of a rural homestead. In the background you can see the corn that is ripe for picking (for the cows that is...) The leaves are falling, the pumpkins are carved, and the weather is beautiful. In this image, I tried to really portray the feeling of "autumn". I hope you like it.
