

Extension Overload is an application for managing extensions, control panels, control strip modules and contextual menus. It offers detailed information on 4265 extensions and control panels, control strip modules and contextual menu items in your system. It also lets you activate and deactivate them, so that you can always easily tailor your system to your current requirements. In addition, Extension Overload includes a useful collection of helpful information and tidbits.

Extension Overload Features

- * Allows you to enable and disable your Extensions, Control Panels, Control Strip Modules and Contextual Menu Items on the fly without going to the system folder.
- * Allows you to preview, enable and disable fonts.
- * Provide detailed descriptions of 2900 extensions, 2900 control panels, 200 Control Strip Modules and 100 Contextual Menu Items both from Apple and from other companies.
- * Covers extensions and control panels from System 7, 7.5, 7.6, Mac OS 8, 8.1, 8.5, 8.6, 9.0 and 9.1, iMac, G3 and G4.
- * Searching for a particular extension, control panel, control strip module and contextual menu item within the database can be done either by name or description.
- * Searchable system error codes to help make your troubleshooting process easier and faster.
- * Generate reports to keep track of your extensions and control panels.
- * Extension Overload will warn the user if ObjectSupportLib was found in Mac OS 8, 8.5, 8.6 and 9. The user will be able to click 'Delete' to Delete, 'Disable' to Disable and 'Do nothing'.
- * A Tidbits menu that contains interesting tidbits of information including:
 - What is an extension, control panel, shared library?
 - Tips to speed up your Macintosh.
 - A guide on how to get software updates.
