

Summary

The analog circuit board in your Mac is out of adjustment. The error indicates a hardware problem.

Details

The voltage on the analog circuit board in your Mac is too low.

What to do

While measuring from pin 6 of the power/video cable to ground, adjust the variable resistor R56 (labeled Voltage) until your voltmeter reads 5.0 VDC.

If you don;t know what all that means or don't have the necessary equipment, have the computer serviced by an Apple Repair shop.
