SoundMachine 2.7

Short Description

SoundMachine is a user friendly sound file player for common
audio formats such as m-law (mu-law), AIFF, SDII and WAVE. It
supports a simple interface and is well suited to Web browsers or
as a stand-alone application. It has been accelerated for PowerPC
and can be run on the 68K range of Macintoshes (it is a so-called
Fat Binary). However, depending on the sound format being played
the performance of SoundMachine is limited by the speed of the
Macintosh.   It is $10 Shareware; the enclosed "Register"
application facilitates easy payment through Kagi Shareware.

System Requirements

SoundMachine requires System 7. The most recent version of
Apple's Sound Manager (part of the System software) is
recommended (currently version 3.2.1). QuickTime 2.5 or later is
also recommended (but not necessary).
