

File Menu Commands

The File menu offers the following commands:

<u>New</u>	Creates a new document
<u>Open</u>	Opens an existing document
<u>Close</u>	Closes an opened document
<u>Save</u>	Saves an opened document using the same file name
<u>Save As</u>	Saves an opened document to a specified file name
<u>Save Selection</u>	Saves a selection as a file
<u>As</u>	
<u>Insert From File</u>	Inserts contents of another entire file at current caret position
<u>Print</u>	Prints a document
<u>Print Preview</u>	Displays the document on the screen as it would appear printed
<u>Print Setup</u>	Selects a printer and printer connection
<u>1, 2, 3, 4, etc.</u>	Open the last four documents you closed
<u>Exit</u>	Exits HEXEDIT

Edit Menu Commands

The Edit menu offers the following commands:

<u>Insert</u>	Invokes dialog box to prompt for insertion string
<u>Cut</u>	Deletes data from the document and moves it to the clipboard
<u>Copy</u>	Copies data from the document to the clipboard
<u>Paste</u>	Pastes data from the clipboard into the document
<u>Select</u>	Selects all data in active document
<u>all</u>	
<u>Clear all</u>	Delete all data in the active document

View Menu Commands

The View menu offers the following commands:

<u>Toolbar</u>	Shows or hides the toolbar
<u>Status Bar</u>	Shows or hides the status bar
<u>Font</u>	Invokes dialog box to prompt for new typeface and point size
<u>Address base 10</u>	Sets base 10 address mode
<u>Address base 16</u>	Sets base 16 address mode
<u>Data Columns</u>	Invokes Dialog box to set number of data columns
<u>ASCII Chart</u>	Displays <u>ASCII</u> Chart

Window Menu Commands

The Window menu offers the following commands, which enable you to arrange multiple views of multiple documents in the application window:

<u>Cascade</u>	Arranges windows in an overlapped fashion
<u>Tile =</u>	Arranges windows in non-overlapped tiles, over-and-under
<u>Tile </u>	Arranges windows in non-overlapped tiles side by side
<u>Duplicate</u>	Creates a new window that views the same document
<u>Window</u>	
<u>Arrange Icons</u>	Arranges icons of closed windows
<u>Close All</u>	Closes all document windows
<u>Window 1, 2, ...</u>	Goes to specified window

Help Menu Commands

The Help menu offers the following commands, which provide you assistance with this application:

<u>Help Topics</u>	Offers you an index to topics on which you can get help
<u>About HEXEDIT</u>	Displays information about HEXEDIT

File New Command

Use this command to create a new document in HEXEDIT.

You can open an existing document with the Open command.

Shortcuts

Toolbar: 
Keys: CTRL+N

File Open Command

Use this command to open an existing document in a new window. You can open multiple documents at once. Use the Window menu to switch among the multiple open documents. See Window 1, 2, ... command.

You can create new documents with the New command.

Shortcuts

Toolbar: 
Keys: CTRL+O

File Open dialog box

The following options allow you to specify which file to open:

File Name

Type or select the filename you want to open. This box lists files with the extension you select in the List Files of Type box.

List Files of Type

Select the type of file you want to open by specifying one or more extensions.

Examples:

*.txt for text files

*.txt; *.ini for text and "ini" files

Drives

Select the drive in which HEXEDIT stores the file that you want to open.

Directories

Select the directory in which HEXEDIT stores the file that you want to open.

Network...

Choose this button to connect to a network location, assigning it a new drive letter.

File Close Command

Use this command to close all windows containing the active document. HEXEDIT suggests that you save changes to your document before you close it. If you close a document without saving, you lose all changes made since the last time you saved it. Before closing an untitled document, HEXEDIT displays the Save As dialog box and suggests that you name and save the document.

You can also close a document by using the Close icon on the document's window, as shown below:

File Save Command

Use this command to save the active document to its current name and directory. When you save a document for the first time, HEXEDIT displays the Save As dialog box so you can name your document. If you want to change the name and directory of an existing document before you save it, choose the Save As command.

Shortcuts

Toolbar: 
Keys: CTRL+S

File Save As Command

Use this command to save and name the active document. HEXEDIT displays the Save As dialog box so you can name your document.

To save a document with its existing name and directory, use the Save command.

File Save As dialog box

The following options allow you to specify the name and location of the file you're about to save:

File Name

Type a new filename to save a document with a different name. A filename can contain up to eight characters and an extension of up to three characters. HEXEDIT adds the extension you specify in the Save File As Type box.

Drives

Select the drive in which you want to store the document.

Directories

Select the directory in which you want to store the document.

File 1, 2, 3, 4 Command

Use the numbers and filenames listed at the bottom of the File menu to open the last four documents you closed. Choose the number that corresponds with the document you want to open.

Exit Command

Use this command to end your HEXEDIT session. You can also use the Close command on the application Control menu. HEXEDIT prompts you to save documents with unsaved changes.

Shortcuts

Mouse: Double-click the application's Control menu button.

Keys: ALT+F4

Cut Command

Use this command to remove the currently selected data from the document and put it on the clipboard. This command is unavailable if there is no data currently selected.

Cutting data to the clipboard replaces the contents previously stored there.

Shortcuts

Toolbar: 
Keys: CTRL+X

Copy Command

Use this command to copy selected data onto the clipboard. This command is unavailable if there is no data currently selected.

Copying data to the clipboard replaces the contents previously stored there.

Shortcuts

Toolbar: 
Keys: CTRL+C

Paste Command

Use this command to insert a copy of the clipboard contents at the insertion point. This command is unavailable if the clipboard is empty.

Note: Data copied from HEXEDIT and pasted into other applications will have embedded ASCII nulls removed.

Shortcuts

Toolbar: 
Keys: CTRL+V

Toolbar Command

Use this command to display and hide the Toolbar, which includes buttons for some of the most common commands in HEXEDIT, such as File Open. A check mark appears next to the menu item when the Toolbar is displayed.

See [Toolbar](#) for help on using the toolbar.

Toolbar

The toolbar is displayed across the top of the application window, below the menu bar. The toolbar provides quick mouse access to many tools used in HEXEDIT,

To hide or display the Toolbar, choose Toolbar from the View menu (ALT, V, T).

The toolbar may be undocked from the top of the window and kept as a floating toolbar, or may be docked along the bottom or either side of the window. To dock or undock, simply drag the toolbar to the desired location.

Click To

Open a new document.

Open an existing document. HEXEDIT displays the Open dialog box, in which you can locate and open the desired file.

Save the active document or template with its current name. If you have not named the document, HEXEDIT displays the Save As dialog box.

Print the active document.

Insert a data string.

Remove selected data from the document and stores it on the clipboard.

Copy the selection to the clipboard.

Insert the contents of the clipboard at the insertion point.

Invoke dialog box prompting for a search string.

Invoke dialog box prompting for search and replace strings.

Invoke dialog box prompting for new caret address.

Invoke dialog box prompting for new display font.

Set Decimal or Hexadecimal address display and entry mode.

Invokes Dialog Box that sets number of data columns.

Display ASCII Chart.

Status Bar Command

Use this command to display and hide the Status Bar, which describes the action to be executed by the selected menu item or depressed toolbar button, and keyboard latch state. A check mark appears next to the menu item when the Status Bar is displayed.

See [Status Bar](#) for help on using the status bar.

Status Bar

The status bar is displayed at the bottom of the HEXEDIT window. To display or hide the status bar, use the Status Bar command in the View menu.

The left area of the status bar describes actions of menu items as you use the arrow keys to navigate through menus. This area similarly shows messages that describe the actions of toolbar buttons as you depress them, before releasing them. If after viewing the description of the toolbar button command you wish not to execute the command, then release the mouse button while the pointer is off the toolbar button.

The next area to the right indicates the file address of the caret in the active document window. This address is shown in Decimal if the  button is pressed, or in Hexadecimal if the  button is pressed.

The rightmost two areas of the status bar indicate which of the following keys are latched down:

Indicator	Description
CAP	The Caps Lock key is latched down.
NUM	The Num Lock key is latched down.

New Command

Use this command to open a new window with the same contents as the active window. You can open multiple document windows to display different parts or views of a document at the same time. If you change the contents in one window, all other windows containing the same document reflect those changes. When you open a new window, it becomes the active window and is displayed on top of all other open windows.

Cascade Command

Use this command to arrange multiple opened windows in an overlapped fashion.

Tile Comand

Use this command to arrange multiple opened windows in a non-overlapped fashion.

Tile =

Use this command to arrange multiple opened windows in an over-and-under fashion.

Tile ||

Use this command to arrange multiple opened windows side-by-side

Window Arrange Icons Command

Use this command to arrange the icons for minimized windows at the bottom of the main window. If there is an open document window at the bottom of the main window, then some or all of the icons may not be visible because they will be underneath this document window.

Window 1, 2, ... Command

HEXEDIT displays a list of currently open document windows at the bottom of the Window menu. A check mark appears in front of the document name of the active window. Choose a document from this list to make its window active.

Index Command

Use this command to display the opening screen of Help. From the opening screen, you can jump to step-by-step instructions for using HEXEDIT and various types of reference information.

Once you open Help, you can click the Contents button whenever you want to return to the opening screen.

Using Help Command

Use this command for instructions about using Help.

About Command

Use this command to display copyright and legal notices, and version number of your copy of HEXEDIT.

Context Help Command

Use the Context Help command to obtain help on some portion of HEXEDIT. When you choose the Toolbar's Context Help button, the mouse pointer will change to an arrow and question mark. Then click somewhere in the HEXEDIT window, such as another Toolbar button. The Help topic will be shown for the item you clicked.

Shortcut

Keys: SHIFT+F1

Title Bar

The title bar is located along the top of a window. It contains the name of the application and document.

To move the window, drag the title bar. Note: You can also move dialog boxes by dragging their title bars.

A title bar may contain the following elements:

- Application Control-menu button
- Document Control-menu button
- Maximize button
- Minimize button
- Name of the application
- Name of the document
- Restore button

Scroll Bars

Displayed at the right and bottom edges of the document window. The scroll boxes inside the scroll bars indicate your vertical and horizontal location in the document. You can use the mouse to scroll to other parts of the document.

Clicking on the up or down arrows on the scroll bar causes the display to scroll down or up.

Between the up and down arrows is a rectangular slot in which slides a small box called a thumb.

Clicking on the thumb, holding the mouse button down, and moving the thumb up or down scrolls the document display according to the position of the thumb box in its slot.

Clicking on the rectangular slot between the thumb box and either the up or down arrow causes the document display to scroll down or up one page at a time.

Size Command

Use this command to display a four-headed arrow so you can size the active window with the arrow keys.

After the pointer changes to the four-headed arrow:

1. Press one of the DIRECTION keys (left, right, up, or down arrow key) to move the pointer to the border you want to move.
2. Press a DIRECTION key to move the border.
3. Press ENTER when the window is the size you want.

Note: This command is unavailable if you maximize the window.

Shortcut

Mouse: Drag the size bars at the corners or edges of the window.

Move Command

Use this command to display a four-headed arrow so you can move the active window or dialog box with the arrow keys.

Note: This command is unavailable if you maximize the window.

Shortcut

Keys: CTRL+F7

Minimize Command

Use this command to reduce the HEXEDIT window to an icon.

Shortcut

Mouse: Click the minimize icon  on the title bar.
Keys: ALT+F9

Maximize Command

Use this command to enlarge the active window to fill the available space.

Shortcut

Mouse: Click the maximize icon  on the title bar; or double-click the title bar.
Keys: CTRL+F10 enlarges a document window.

Next Window Command

Use this command to switch to the next open document window. HEXEDIT determines which window is next according to the order in which you opened the windows.

Shortcut

Keys: CTRL+F6

Previous Window Command

Use this command to switch to the previous open document window. H_{EXEDIT} determines which window is previous according to the order in which you opened the windows.

Shortcut

Keys: SHIFT+CTRL+F6

Close Command

Use this command to close the active window or dialog box.

Double-clicking a Control-menu box is the same as choosing the Close command.

Note: If you have multiple windows open for a single document, the Close command on the document Control menu closes only one window at a time. You can close all windows at once with the Close command on the File menu.

Shortcuts

Keys: CTRL+F4 closes a document window
 ALT+F4 closes the HEXEDIT window or dialog box

Restore Command

Use this command to return the active window to its size and position before you chose the Maximize or Minimize command.

Switch to Command

Use this command to display a list of all open applications. Use this "Task List" to switch to or close an application on the list.

Shortcut

Keys: CTRL+ESC

Dialog Box Options

When you choose the Switch To command, you will be presented with a dialog box with the following options:

Task List

Select the application you want to switch to or close.

Switch To

Makes the selected application active.

End Task

Closes the selected application.

Cancel

Closes the Task List box.

Cascade

Arranges open applications so they overlap and you can see each title bar. This option does not affect applications reduced to icons.

Tile

Arranges open applications into windows that do not overlap. This option does not affect applications reduced to icons.

Arrange Icons

Arranges the icons of all minimized applications across the bottom of the screen.

Select All Command

Selects all data in the active document.

Clear All Command

Removes all data from active document.

Next Pane Command

Moves focus to next document window in sequence.

Prev Pane Command

Moves focus to previous document window in sequence.

Modifying the Document

There are several ways to modify a document:

- Delete a character
- Delete a selection
- Cut a selection
- Insert a string
- Insert a selection from the clipboard
- Replace a string
- Replace a selection
- Export a selection to a file
- Import a file

No Help Available

No help is available for this area of the window.

No Help Available

No help is available for this message box.

<< If you wish to author help specific to each message box prompt, then remove the AFX_HIDP_xxx values from the [ALIAS] section of your .HPJ file, and author a topic for each AFX_HIDP_xxx value. For example, AFX_HIDP_INVALID_FILENAME is the help topic for the Invalid Filename message box. >>

Purpose

HEXEDIT is a binary editor which makes it possible to view or change any byte in a file. Data is displayed and may be changed in either ASCII or Hexadecimal format.

Save Selection As

To save a selection as a file:

1. Select the data
2. Pull down the File menu
3. Click on Save Selection As
4. A file dialog box will prompt for a file name
5. Pick a file
6. Click on OK or press Enter

Address base 10

Sets base 10 mode for display and entry of all address fields, including address column in data window, current address field on status bar, and Goto Address edit box.

Address base 16

Sets base 16 mode for display and entry of all address fields, including address column in data window, current address field on status bar, and Goto Address edit box.

Insert From File

To import from a file:

1. Move the caret to the desired insertion point
2. Pull down the File menu
3. Click on Insert from file
4. A file dialog box will prompt for a file name
5. Pick a file
6. Click on OK or press Enter

Find Next

Causes HEXEDIT to search for and highlight the next occurrence of the search string. Searching begins at the current caret position and proceeds through the file in the up or down direction according to the setting of the direction buttons.

Find Previous

Causes HEXEDIT to search for and highlight the previous occurrence of the search string. Searching begins at the current caret position and proceeds through the file in the direction **opposite** that indicated in the setting of the direction buttons.

Compare Files

HEXEDIT can locate the first discrepancy between two files. This feature is activated as follows:

1. Open and click on one of the two documents to be compared.
2. Open and click on the second document.
3. Click on the Search menu item.
4. Click on the Compare files sub item.
5. HEXEDIT will place the caret at the position of the first discrepancy between the files.

Font

To change the display font in a document window:

1. Press Ctrl+F, or click the  button on the toolbar, or pull down the View menu and select Font
2. A dialog box prompting for a font, font style, and size will appear. Only fixed pitch fonts in regular and bold styles are available.
3. Click on OK or press Enter

Close All

Close all document windows. Prompting will occur to allow saving of each document that had been modified from its previously stored version.

ASCII

The term ASCII refers to the American Standard Code for Information Interchange 8-bit character set, consisting of the first 128 (numbered 0 to 127) characters of the ANSI (American National Standards Institute) character set. The term ASCII characters is sometimes used to mean all 256 characters defined for a particular system, including the extended ASCII characters. ASCII values represent letters, digits, special symbols, and other characters.

HEXEDIT Displays all 256 possible character values, represented in the Hex display section as two-digit Hexadecimal numbers, and in the ASCII section as the corresponding character in the currently selected font.

Hexadecimal

A Hexadecimal number is based on a radix of 16, rather than the common radix of 10 used for decimal numbers. A Hexadecimal (or "Hex") number in `HEXEDIT` represents a byte (8 bits) of file data, represented as two Hexadecimal digits, each denoted by the customary decimal digits 0 through 9, or the letters A through F representing the values 10 through 15, as necessary in radix 16.

Inserting Data

To insert data:

1. Place the caret at the desired insertion point
2. Click on the  button on the toolbar, or pull down the Edit menu and choose Insert
3. A dialog box will appear with edit boxes labeled ASCII and Hex
4. Select the desired edit box for ASCII or Hexadecimal entry
5. Enter the desired data
6. Select OK or press Enter
7. The data will be inserted into the document view

Data may also be inserted by placing the caret in either the Hex or ASCII sections and simply begin typing the desired data. The Insert dialog box will pop up automatically to accept keyboard input.

Moving around in file

Moving around in the file can be accomplished with the keyboard or the mouse.

To move using the mouse:

- Move the mouse cursor in the Hex or ASCII section of the window, press left mouse button
- Click the left mouse button on the UP or DOWN scroll arrows to scroll one line at a time
- Click and drag the square box in the rectangular slot between the UP and DOWN scroll arrows
- Click the rectangular slot above the DOWN arrow or below the UP arrow to move a page at a time

To move using the keyboard:

- Press the TAB key to move between Hex and ASCII sections
- Press the up, down, left or right arrow keys to move one line or one column at a time
- Press Pg Up or Pg Dn to move a page at a time
- Press Ctrl+Home to move to the beginning of the file
- Press Ctrl+End to move to the end of the file

Selecting Data

Selecting data for deletion, copy to clipboard, replacement from clipboard, or saving selection as a file can be accomplished with the mouse or the keyboard.

To select data using the mouse:

1. Move the caret to the beginning of the desired selection
2. Press the left mouse button to place the caret
3. Leave the mouse button pressed, and drag the mouse cursor to the end of the desired selection
4. Release the mouse button
5. The selection will be highlighted in inverse video

To select using the keyboard:

1. Move the caret to the beginning of the desired selection
2. Press and hold the shift key
3. Using the arrow and page keys, move to the end of the desired selection
4. Release the shift key
1. The selection will be highlighted in inverse video

To select all data in document:

1. Press Ctrl+A, or pull down the Edit menu and choose Select All

Extending a Selection

To extend a selection:

1. Press the shift key
2. Move the caret
3. Release the shift key

To extend a selection to the next occurrence of a search string:

1. Pull down the Search menu and select Find, or click on the  button
2. Enter the search string
3. Press Shift+Enter

To extend a selection to a specific file address:

1. Pull down the Search menu and select Goto address, or click on the  button
2. Enter the desired address
3. Press Shift+Enter

Searching for Data

To search for data:

1. Click the  button on the toolbar, or pull down the Search menu and select Find
2. Enter the desired search string in the ASCII or Hex edit boxes
3. Select a search direction
4. Select case-sensitive or case-insensitive search
5. Select Find Next, or press Enter

Changing number of Data Columns

To set number of Data Columns in the Data Section:

1. Move the mouse pointer over the vertical dividing line between the Hex and ASCII sections so that the cursor changes to .
2. Press and hold the Left mouse button. A small window appears below the mouse cursor.
3. Drag the mouse right or left until the small window indicates the desired number of columns.
4. Release the mouse button.

To use a dialog box to change the number of Data Columns:

1. Click the  button on the toolbar, or pull down the View menu and select Data Columns
2. Enter the desired number of data columns in the edit box
3. Select OK or press Enter

Changing the Address mode

To change the Address mode to specify Decimal or Hex display in the Address Section, on the Status bar, and in the Go To dialog box:

1. Move the mouse pointer over the vertical dividing line between the Address and Hex sections so that the cursor changes to .
2. Press and hold the Left mouse button. A small window appears below the mouse cursor.
3. Drag the mouse right or left until the small window indicates A10 or A16 as desired.
4. Release the mouse button.

Or, use one of the following alternative techniques:

- Press Ctrl+D for base 10, or Ctrl+H for base 16.
- Press

or

on the toolbar.

- Pull down the View menu and select Address base 10 or Address base 16.

ASCII Chart

Opens a read-only document that displays all ASCII codes in currently selected Font.

Go to a File Address

To move to a file address:

1. Press Ctrl+G, or click on the  button on the toolbar, or pull down the Search menu and select Goto Address
2. A dialog box will appear, prompting for an address
3. If the current address mode is Decimal (the  button is depressed), enter the desired address in Decimal.
4. If the current address mode is Hexadecimal (the  button is depressed), enter the desired address in Hexadecimal.
5. Click on OK or press Enter

Replacing Data

Replacing data can be accomplished by using the clipboard to cut, copy, and paste. Or, an automatic search and replace operation can be performed either one at a time with confirmation, or all at once without confirmation.

Both the search string and the replacement strings may be entered in ASCII or Hexadecimal format. To automatically search and replace:

1. Press Ctrl+R, or click the  button on the toolbar, or pull down the Search menu and select Replace
2. Enter the desired search string in the "Find What" ASCII or Hex edit boxes
3. Enter the desired replacement string in the "Replace With" ASCII or Hex edit boxes
4. Select case-sensitive or case-insensitive search
5. Click on Find Next to search forward to the next occurrence of the search string
6. Click on Replace to replace data
7. Click on Replace All to replace all occurrences

Deleting data

To delete one character:

- Place the caret before the byte to delete, then press Delete on the keyboard
- Or, place the caret after the byte to delete, then press Backspace on the keyboard

To delete a range of characters:

1. Select the data to be deleted
2. Press Delete or Backspace

To delete all data in document:

1. Pull down the Search menu and select Clear all

Hexedit Features

- Lets you read, display, modify, write, and print files in ASCII and Hexadecimal format
- Every byte of file is visible and may be modified or deleted
- Data may be cut or copied to the clipboard
- Data may be inserted from the keyboard or the clipboard
- Data may be exported or imported to or from other files
- Global data search and replacement
- File comparison to locate discrepancies
- Data displayed in a variety of fonts
- Accommodates very large files
- Accommodates long file names
- Safeguards against system crashes

Display Format

A document window consists of three sections:

- An Address section displaying the starting address in of the line of data displayed in the Hexadecimal and ASCII sections. Addresses are displayed in base 10 (Decimal) or base 16 (Hexadecimal). To set Decimal address mode, click the  button, or select “Address base 10” on the View menu. To set Hexadecimal address mode, click the  button, or select “Address base 16” on the View menu.
- A Hexadecimal data section displaying data in Hexadecimal format. A header line indicates the offsets from the address shown in the Address column.
- An ASCII section displaying the row's data in ASCII format. A header line indicates the offset from the address shown in the Address column.

Address Section	Hexadecimal Data Section	ASCII Section
0000000000	00 01 02 03 04 05 06 07	01234567
0000000008	08 09 0A 0B 0C 0D 0E 0F	
0000000016	10 11 12 13 14 15 16 17	
0000000024	18 19 1A 1B 1C 1D 1E 1F	
0000000032	20 21 22 23 24 25 26 27	!"#\$%&'
0000000040	28 29 2A 2B 2C 2D 2E 2F	()*+,-./
0000000048	30 31 32 33 34 35 36 37	01234567
0000000056	38 39 3A 3B 3C 3D 3E 3F	89:;<=>?
0000000064	40 41 42 43 44 45 46 47	@ABCDEFGH
0000000072	48 49 4A 4B 4C 4D 4E 4F	IJKLMNOP
0000000080	50 51 52 53 54 55 56 57	QRSTUVWXYZ
0000000088	58 59 5A 5B 5C 5D 5E 5F	XYZ[\]^_
0000000096	60 61 62 63 64 65 66 67	`abcdefg
0000000104	68 69 6A 6B 6C 6D 6E 6F	hijklmno
0000000112	70 71 72 73 74 75 76 77	pqrstuvw

System Crashes

HEXEDIT provides substantial protection against loss of data in the event of a system crash. This protection results from HEXEDIT's use of temporary files instead of system memory to store data while editing.

To recover suspected lost data from a HEXEDIT session, it is necessary to understand how HEXEDIT creates temporary work files which store data during a HEXEDIT session.

When a file is opened, or a new document is created in HEXEDIT, the data is stored in a temporary file having a name of the form:

HEXxxxx.TMP

where xxxx represents a random four-digit Hexadecimal number. This temporary file is located in a directory chosen as follows:

1. The directory specified in the TEMP environment variable. This is usually set in the AUTOEXEC.BAT file.
2. If no TEMP environment variable is defined, the current DOS directory on the current drive is chosen. C:\WINDOWS is a likely candidate.

To recover suspected lost files:

1. Make sure HEXEDIT is not currently running. Press Ctrl+ESC to invoke Task List to ascertain this.
2. Use File Manager to identify all files of the form HEXxxxx.TMP
3. Use HEXEDIT to search each of these files for lost data
4. Save the document with an appropriate file name

Note: Because the temporary files come and go during a HEXEDIT session, it is not advisable to search for HEXxxxx.TMP files while a copy of HEXEDIT is running.

Version

The HEXEDIT version number can be found in the About box accessible from the Help menu, or from the  button on the toolbar.

The help file you are now reading was designed for HEXEDIT version 2.0

Print command (File menu)

Use this command to print a document. This command presents a Print dialog box, where you may specify the range of pages to be printed, the number of copies, the destination printer, and other printer setup options.

Shortcuts

Toolbar: 
Keys: CTRL+P

Print dialog box

The following options allow you to specify how the document should be printed:

Printer

This is the active printer and printer connection. Choose the Setup option to change the printer and printer connection.

Setup

Displays a Print Setup dialog box, so you can select a printer and printer connection.

Print Range

Specify the pages you want to print:

All Prints the entire document.

Selectio Prints the currently selected text.

n

Pages Prints the range of pages you specify in the From and To boxes.

Copies

Specify the number of copies you want to print for the above page range.

Collate Copies

Prints copies in page number order, instead of separated multiple copies of each page.

Print Quality

Select the quality of the printing. Generally, lower quality printing takes less time to produce.

Print Progress Dialog

The Printing dialog box is shown during the time that Hexedit is sending output to the printer. The page number indicates the progress of the printing.

To abort printing, choose Cancel.

Print Preview command (File menu)

Use this command to display the active document as it would appear when printed. When you choose this command, the main window will be replaced with a print preview window in which one or two pages will be displayed in their printed format. The print preview toolbar offers you options to view either one or two pages at a time; move back and forth through the document; zoom in and out of pages; and initiate a print job.

Print Preview toolbar

The print preview toolbar offers you the following options:

Print

Bring up the print dialog box, to start a print job.

Next Page

Preview the next printed page.

Prev Page

Preview the previous printed page.

One Page / Two Page

Preview one or two printed pages at a time.

Zoom In

Take a closer look at the printed page.

Zoom Out

Take a larger look at the printed page.

Close

Return from print preview to the editing window.

Print Setup command (File menu)

Use this command to select a printer and a printer connection. This command presents a Print Setup dialog box, where you specify the printer and its connection.

Print Setup dialog box

The following options allow you to select the destination printer and its connection.

Printer

Select the printer you want to use. Choose the Default Printer; or choose the Specific Printer option and select one of the current installed printers shown in the box. You install printers and configure ports using the Windows Control Panel.

Orientation

Choose Portrait or Landscape.

Paper Size

Select the size of paper that the document is to be printed on.

Paper Source

Some printers offer multiple trays for different paper sources. Specify the tray here.

Options

Displays a dialog box where you can make additional choices about printing, specific to the type of printer you have selected.

Network...

Choose this button to connect to a network location, assigning it a new drive letter.
