Auto-Configure Button
Help Button

This specifies the maximum sampling rate at which the codec will attempt realtime compression. A higher sampling rate requires more system resources, so less-powerful systems should use a lower value.

This specifies the maximum sampling rate at which the codec will attempt realtime decompression. A higher sampling rate requires more system resources, so less-powerful systems should use a lower value.

Pressing this button saves any changes in the configuration and closes the dialog box. The changes take effect after rebooting your system.

Pressing this button discards any changes in the configuration and closes the dialog box.

When this button is pressed, the codec will try to determine the best configuration for the system. When it is finished, you can press OK to save the changes, or you can press Cancel to discard the changes.

Press this button to get help.
