About Installation

This installation program is installing the driver for your scanner. A driver is an interface which communicates with your scanner and gives the orders to your scanner. This driver can be retrieved from the Acquire menu in the Image Editing (Corel Photopaint) or in your OCR (ReadIris & CardIris) program. This software takes about 100K of your hard disk space and the entire process does take only a minute, although additional time and space will be added when you install the other Programs.
