

# HP 3000 Business Computer Systems

## HP 3000 Overview

We've spent two decades shaping the HP 3000 family of multiuser computer systems to meet our customers' complex and changing business needs. As a result, today's HP 3000 is a smarter investment than ever. With the HP 3000 you're not forced to choose between robust business functionality today and a growth path for tomorrow. The HP 3000 delivers:

**Unparalleled customer satisfaction, as shown by top rankings in numerous independent surveys.**

**Access to the best commercial applications from world-class suppliers.**

### RISC technology to meet business needs.

- Superior growth path with simple, processor board-based upgrades and complete compatibility across a broad systems family that supports from eight to thousands of users.

- Systems more powerful than IBM's 3090 400J mainframes.

- Leading price/performance as demonstrated by industry-standard TPC benchmarks.

- Low cost of ownership beyond purchase price, with savings every month on staffing, support costs, and power/cooling requirements.

- World-renowned HP reliability and quality.

### Functionality for systems that run businesses.

- System availability, data integrity, and recovery for business critical information.

- Easy management of systems in a data center or a large distributed network.

- Connectivity with over 30 computer families from all major vendors.

- Comprehensive application development and data management solutions from HP and leading third-party vendors.

- Investment protection through support of open systems, including POSIX interfaces.

- Integration of information and resources through client/server computing.
