

# MouseTool 1.0

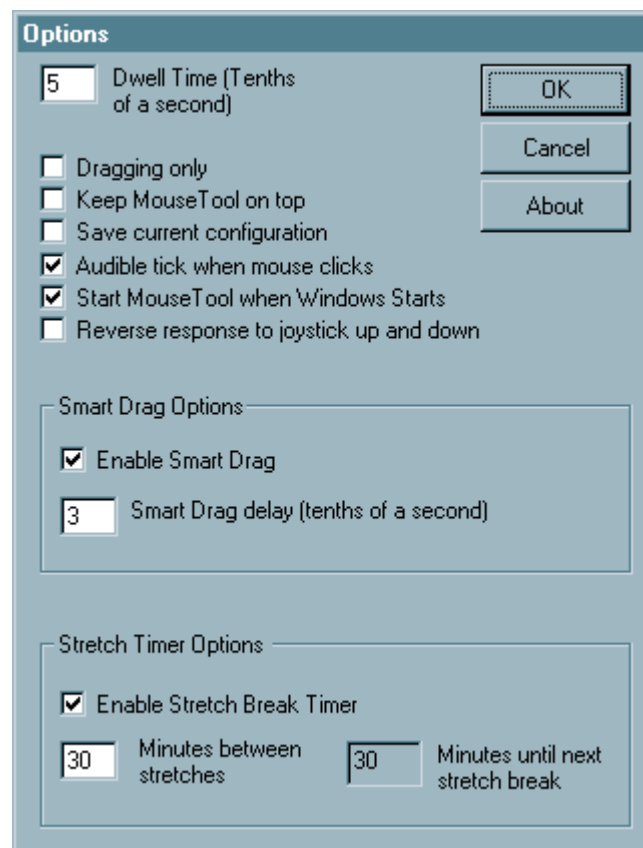

**Opis:** ..... čudnovati *driver* za tipku miša

**Okruženje:** ..... Windows 95 / NT

**Deinstalacija:** .... Da

**Licenca:** ..... Shareware, 50 USD, besplatan 20 dana

**Ocjena:** ..... 

The screenshot shows the 'Options' dialog box for MouseTool 1.0. It features a title bar with the text 'Options'. The main area contains several settings:

- A numeric input field with the value '5' and the label 'Dwell Time (Tenths of a second)'. To its right are three buttons: 'OK', 'Cancel', and 'About'.
- A list of checkboxes:
  - Dragging only
  - Keep MouseTool on top
  - Save current configuration
  - Audible tick when mouse clicks
  - Start MouseTool when Windows Starts
  - Reverse response to joystick up and down
- A section titled 'Smart Drag Options' containing:
  - Enable Smart Drag
  - A numeric input field with the value '3' and the label 'Smart Drag delay (tenths of a second)'
- A section titled 'Stretch Timer Options' containing:
  - Enable Stretch Break Timer
  - Two numeric input fields, both with the value '30'. The first is labeled 'Minutes between stretches' and the second is labeled 'Minutes until next stretch break'.

Vjerojatno ste već čuli za inteligentne upravljače miša, ali ovako nešto blesasto zasigurno još niste vidjeli: uz ovaj program više nećete nikada morati kliktati mišem. Nikada! Jednostavno zadržite mišju strelicu neko vrijeme na istom mjestu i program će sam simulirati klik lijevom tipkom miša na to mjesto. Super stvar ako vam se pokrvarilo lijevo mišje oko ili ste jednostavno beskrajno lijeni. (S.Roje)
