1.3 Requirements To Run The Game

 BØØMiN' ECK!

The game was programmed on a standard A1200 (2Mb CHIP, 68020 CPU etc)
 It has been tested (so far) on only my own A1200 (unexpanded)

It should work on at least any A1200 although I don't know about other
 Amiga models. I don't use any fancy trickery (Hey this IS AMOS!) or
 any naughty pokes so the game should perform equally well on any
 system. One thing to bear in mind is that it may require just over 1
 Mb of CHIP memory to run fully so that's A500 owners out! I'll test
 to see if this is true as I'm only guessing.

I've also been having a compiling problem were anything compiled by me
 will only work on an A1200. Strange and don't know why?

 So, to be safe run this game on an A1200 or better.

1.4 Are you REALLY going to read this?

 BØØMiN' ECK!

Far away in a land where Lego is made, a crisis was happening. The

machines creating the Lego men were goofing up more than normal. All the reject Lego men had no legs so they had to wobble to move about. Two of these rejects weren't having any more of this and so wobbled to the creators hill in Lego land. Dr.Technic (the creator of Lego) knew what they were here to see him about and so before they could say too much offered them a challenge.

"My mazes are becoming cluttered with loose bricks and are making them very untidy and difficult to wonder round. If you on your own or with a friend can clear them as best you can I will award you with a very special gift. I have one pair of legs left to which I will colour and give to the winner. If you fail to get through the mazes then you will be killed. It won't be easy, oh no! I've created a gang of ghosts to wonder the lonely mazes in search of someone to scare...if they find you you'll know!"

Now you could find out about
 THE AIM OF THE GAME
 or just
 pop back to the contents page.

1.5 What is involved in playing the game?

 BØØMiN' ECK!

Starting Out...

-----\ensuremath{\lnot}

On the options screen you have a choice to make. You can play the game, exit back to AmigaDOS or load some new levels.

The game can be played by either 1 or 2 players. Depending on the amount of players the game will vary.

In 1 player mode you will be playing against ghosts who will wonder randomly through walls across the maze. The amount of ghosts depends on the difficulty set. 1= easy (only one ghost) whilst 7 = bugger (seven ghosts) As you intriduce more ghosts some of them will become protected from your bombs making it more of a challenge to get around the maze without dying!

During a 2 player game you will be up against the other human. The competition will be to see who can get the most points after completing all the mazes.

In either game mode the player(s) will recieve 3 lives FOR EACH MAZE so you should have a good chance. However it ain't gonna be easy to get through all them levels!

REMEMBER : The idea isn't just to find the exit but also to grab as many points as possible on each maze.

If you choose to load some new levels you will be given a file requester (aslong as the Req.library is available in the Libs: directory) in which to locate and select the new .MAP data file. This

can be anywhere (on another disk or hard drive even a CD-ROM!). At the moment you cannot create new levels as the map editor is not at a release standard. However when it's released you can pick it up from me direct. Get in contact at the

address

and leave

your name and address so I can contact you when the level editor is finished.

There are thirty levels supplied on this disk. Have fun!

Bomb Blowin'

-----\ensuremath{\lnot}

To dispose of any blocks in the way simply drop a bomb by pressing the fire button. You will have a few seconds to leg it then the bomb will blow! The space which the bomb(s) cover will vary depending on wether you have picked up the

long range

bonus. When a bomb is about to blow

it is advisable that you get as far away as possible as bits of shrapnel can fly further than the bomb explosion and harm you, meaning a loss of a life. Also a 'top tip' is 'mind you head!'

When the blocks are blown away a

bonus

may be uncovered.

Completing Levels

-----\ensuremath{\lnot}

Each level is completed by either...

- a) finding the exit square hiden under a block in the maze
- b) blowing up every block in the maze to clear it

...however some levels can only be completed by one of the above methods, and you will not be told which method goes with each level so you'll have to work it out yourself.

In the default (when you first load the game) there are 30 levels to challenge you. Of course using the 'load levels' funstion will make the amount of levels endless.

Score Panel

-----\ensuremath{\lnot}

The panel at the top of the screen features information for both players even if it's in a 1 player game. The score is shown along with two other useful bits of info. These are

- (1) Amount of bombs - Number of bombs which the player is able to drop at a time. This is shown as a picture of a bomb with a number next to it.
- (2) Long Blast Mode - When you pick up the bonus an "L" will appear just under the bomb amount. You now have a longer blast for the bombs.

1.6 All the collectables you could ever need

Throughout the mazes bonuses can be uncovered by blowing the blocks away. There are a variety of bonus pick-ups available and here they are:-

TREASURE CHEST - Offers a bonus of 250 points.

BOMB IN BOX - Extra bomb. A maximum of 9 bombs allowed per player.

JOYSTICK - This will swap the characters being controlled over between players. Very annoying! Only works in two player games otherwise not effective.

LETTER "L" - Activate long blast mode for the player.

QUESTION MARK - A random pick of long blast, extra bomb, joystick or bonus but could be nothing!

1.7 Hey toppo info for all you budders!

BØØMiN' ECK!

"Boomin' Eck" was filmed before a live studio audience.

As you SHOULD have guessed it was coded in "AMOS Professional" and made executable with the "AMOS Pro Compiler".

I feel that I've used AMOS well and tried to include as many different routines as possible in the game without making it look like a demo. I've covered scrolling messages, bitplane shifting, machine code inclusion, vertical scrolling, mapping and collision, AMAL, Font Text, alternative file requester, music & sound effects, animation (not AMAL), star fields ... and maybe some others!

I think it does prove that AMOS can still chugg out a decent-ish game. At least it doesn't look like the other tacky AMOS stuff people dare to release. Most of the stuff in the Official AMOS PD library is crap (I've got the CD-ROM of the library)

I strongly recommend you get hold of some AMOS extensions. Many are available in the Public Domain.

Turbo 1.9
Stars Pro
Jd
LDos

These can be bought or have been given away on a "CU Amiga" coverdisk:

Craft 1.0
MusicCraft 1.0
Craft 2 Turbo+

AMOS 3D

Of course you can do simular things that new extension instructions provide from AMOS using library calls and pokes/dokes in memory. Be prepared for ALOT of crashes as I had to sit through millions of 'em and wait for my hard drive to re-load AMOS Pro over and over and over again.

The game maps were based on a the map format created by a map editor coded by Brian Bell (Mr AMOS) who used to run the MR AMOS Club in Ireland. I have tweaked the way things work and produced my own map editor to produce maps compatable with only this game.

A map editor to create new levels for "Boomin' Eck!" will be available later on. At the moment I've not got enough time to spend on making it useable for everyone. However I will advertise it in "The Word" (NFA's own disk magazine) and if any of you have written to me with an intrest in the editor I will write back to you with the news of its release. I really am just too kind.

1.8 All the goss for you

NFA - A true British group

Been around for a few years. Produced a top line of slideshows called "BodyShop" and a few bits. All coding in the group is performed by Freak and me (Budda) using only AMOS Professional. Check out some of the releases as it really does show what AMOS can do!

I mean, "Bodyshop 8" is even AGA and running from AMOS, how do you do that? well it's all a clever trick!

Now - in the year of 1995 we're planning a mass orgy of releases.

All these productions have been recently released and are available in the Public Domain:

Beeps, Bops & Words	... Chip tune magazine with selections of chip tunes by resident NFA muso Elf. Currently upto issue three.
BodyShop 8	... "Piccys of glamorously alluring women" says Amiga Format.
The Word	... NFAs own disk mag. Issue 5 out soon and it'll whip the ass off LSD Grapevine with it's kewl code. All in AMOS you know - check it out.
Merlins Tool Stash	... New collection of essential new released utils. A good replacment for LSDs Legal Tools.
Noise Pollution #1	... A compo of top long tunes by Elf with a clicky interface to select from.
DF0: Games	... Currently upto disk 4, covers new PD games recently released
NFAPlay & NFAPlay CLi	... Music player with your favourite group all over it. CLi utils in AMOS - whatever next!
Jiffy Disk	... Disk and address labler in a cute way.
Mem Executer	... Memory vector checker. Sort of Virus Killer.
C= Revisited	... Tunes from the old days of the C64.

All the above plus lots more new releases can be picked up from NFAs very own BBS alternatively you can scribble to one of the addresses for a disk list of all the latest PD.

Handle: Buddha
Group: NFA

+-----+

Starting coding on my little Amstrad CPC464 when I was 8 years old. Been using AMOS for 3 years now. Joined NFA 7 months ago. In all this time I've only ever finished two games in AMOS. The other game is "Phuk The World" and is public domain, available from 17-Bit Software (Disk 3089). For some reason I get tired of doing a single game if I feel there's no real purpose for doing it.

1.10 The full version for such a nice price?

You are currently the owner of a demo version of "Boomin 'Eck!". This will allow you to play 5 levels from the full game. If you would like the full version it is available direct from me.

The full version contains:-

- more music,
- 30 levels,
- an option to load new 'sets' of levels in which can be created with an optional level editor (not released yet),
- a digitised 'game over' animation,
- a hard drive installer
- and a graphical storyline at the start.

All the above will set you back just £5 + 50p postage and packaging. I will send out a full version within 48 hrs or better by 1st class post. Paying by cheque is the best way, make cheques payable to "M.Carter" for £5.50.

I am not a thief and will send the disk as soon as I can.

Send all orders to:-

Mike Carter
